Planning Commission Staff Report

Project Type: Site Development Section Plan

Meeting Date: March 23, 2020

From: Annisa Kumerow, Planner AK

Location: South of Olive Street Road and east of Wardenburg Road

Description: **Spirit Valley Business Park, Lot 1 (Neff Power):** A Site Development Section Plan, Landscape Plan, Lighting Plan, Architectural Elevations and Architect's Statement of Design for a 2.893 acre tract of land zoned "PI" Planned Industrial District located south of Olive Street Road and east of Wardenburg Road.

PROPOSAL SUMMARY

Stock & Associates Consulting Engineers, Inc. on behalf of K&L Tech Properties, has submitted a Site Development Section Plan, Lighting Plan, Landscape Plan, Architectural Elevations, and Architect's Statement of Design. The request is for a 36,060 +/- square foot office and warehouse building to house a single tenant for a robotics headquarters. The subject site is zoned "PI" Planned Industrial District and is governed under the terms and conditions of City of Chesterfield Ordinance Number 3002.

Figure 1: Subject Site Aerial

HISTORY OF SUBJECT SITE

The site is currently vacant and located in the northern portion of the Spirit Valley Business Park development. In 2007, the City Council approved Ordinance 2373 which rezoned the subject site from "NU" Non-Urban District to "PI" Planned Industrial District. In 2008, Ordinance 2456 repealed Ordinance 2373 to allow for an additional permitted use; subsequently, in 2013 Ordinance 2745 repealed Ordinance 2456 to allow for an additional permitted use. The current governing City of Chesterfield Ordinance Number 3002 was approved by City Council in 2018.

LAND USE AND ZONING OF SURROUNDING PROPERTIES

Direction	Zoning	Land Use
North	"AG" Agricultural District	Farm
South	"PI" Planned Industrial District	Vacant
East	"PI" Planned Industrial District	Vacant
West	"NU" Non-Urban District	Single-family residential

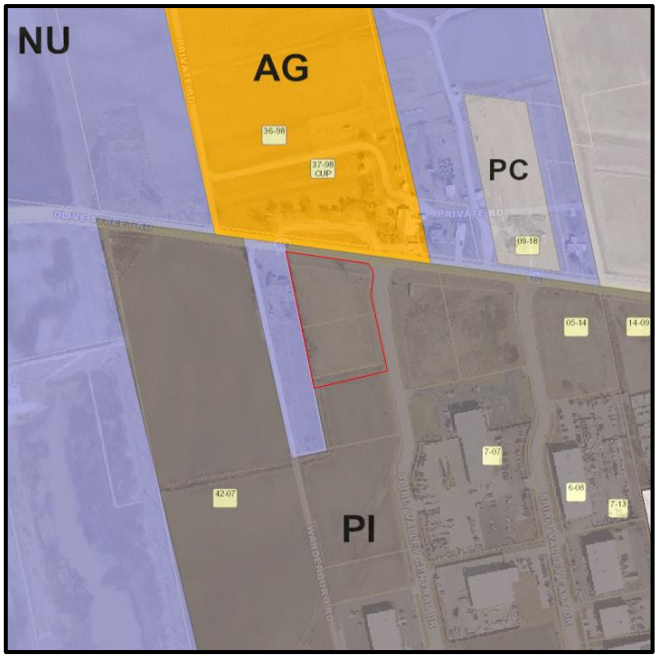

Figure 2: Zoning

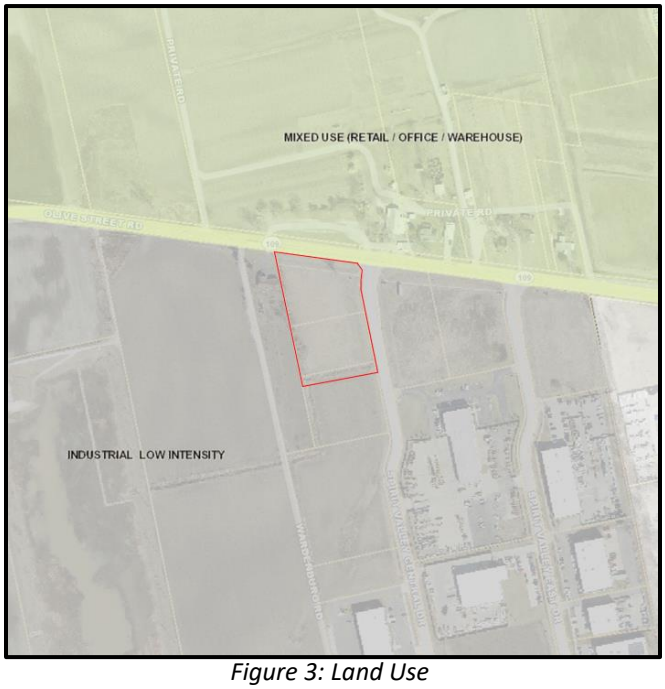

Figure 3: Land Use

COMPREHENSIVE PLAN ANALYSIS

The subject site is located within Ward 4 of the City of Chesterfield. The City of Chesterfield Comprehensive Land Use Plan indicates that this development is within the area designated as Industrial Low Intensity. As seen from the figures and table above, the subject site is bordered by other Industrial Low Intensity designated areas to the east, west, and south.

The City of Chesterfield's Comprehensive Plan also identifies specific plan policies. Outlined below are specific plan policies that are applicable to this request, followed by staff analysis in italics.

Plan Policies

- **6.1 Low-Intensity Industrial –** Low-intensity industrial development should be limited to Chesterfield Valley, including low-intensity industrial assembly, distribution, and research and development business parks, and corporate campuses.
  The location of the proposed office building complies with this policy as it will be located in Chesterfield Valley.

- **7.2.6 Cross-Access Circulation –** Internal vehicular and pedestrian connections between commercial developments should be encouraged.
  A cross access easement extends to the property to the south. Additionally, a 5' sidewalk is proposed along Spirit Valley Central Drive.

Chesterfield Valley Sub-Area and Chesterfield Valley Design Policies

- **3.5.1 Chesterfield Valley Region Retail and Low Intensity Industry—**Regional retail and low-intensity industrial developments should be located in Chesterfield Valley. These include mixed-use office/retail-planned developments and low-intensity industrial assembly.
  The location of the proposed office building complies with this policy as it will be located in Chesterfield Valley.

STAFF ANALYSIS

Zoning

The subject site is zoned "PI" Planned Industrial District and is governed under the terms and conditions of City of Chesterfield Ordinance Number 3002. The submittal was reviewed against the requirements of City of Chesterfield Ordinance 3002 and all applicable requirements of the Unified Development Code and the proposed development adheres to the applicable requirements.

Circulation System & Access

The subject site will be served by two access points on Spirit Valley Central Drive. A cross access easement extends to the neighboring property to the south. A 5' sidewalk along the west side of Spirit Valley Central Drive provides pedestrian circulation.

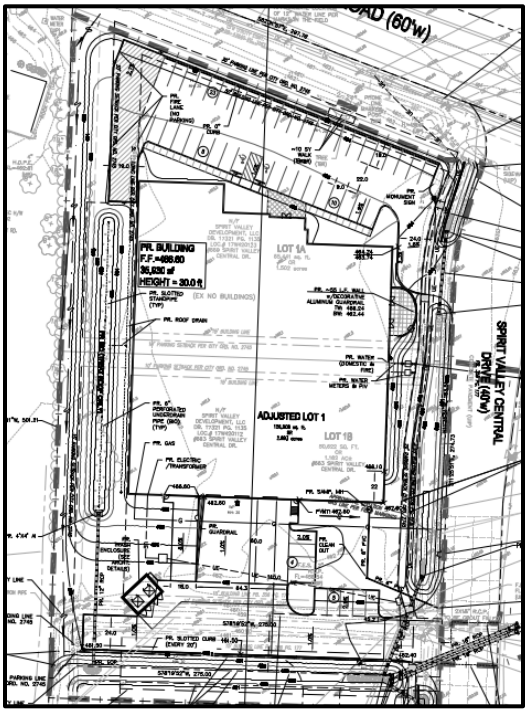

Figure 4: Site Plan

Parking

The minimum required number of parking spaces per the Unified Development Code is 50, while the maximum number of spaces is 69. There are 50 total spaces proposed with this development. Parking is primarily located to the north of the proposed building, with a few spaces located to the south of the building. The service and loading area is also located on the south side of the building.

Landscape Design and Screening

Several different areas of landscaping are proposed in accordance with City Code requirements and the governing ordinance for the site. These include a 30' landscape buffer along the western property line contiguous to the neighboring residential structure, and a 15' landscape buffer for the remainder of the western property line. A 30' landscape buffer is also proposed along Olive Street Road, consisting of a mix of canopy-shade street trees and ornamental trees.

Figure 5: Color Landscape Plan

There is one trash receptacle proposed at the rear of the building, to the southwest of the loading area. The receptacle is adequately screened by tilt-up concrete panel to match the proposed building. Additionally, several evergreen trees will screen the enclosure from public view on three of its sides.

Rooftop mechanical equipment is included on the building. There is a consistent height parapet around the perimeter of the roof; if additional screening beyond the parapets is required, the prefinished metal will be mounted directly to the mechanical unit in order to screen it.

Lighting

Site lighting is proposed for the parking area as required by City Code. Six total fixtures are proposed on the site, with one building-mounted fixture on the rear of the building. These fixtures are utilitarian in nature and feature fully shielded, flat lens, enclosed luminaires.

Architectural Elevations

The proposed building is one story, with top of wall being 30' in height. The exterior building materials will primarily consist of tilt-up concrete panel, insulated glass, Alucobond panels, and steel.

ARCHITECTURAL REVIEW BOARD INPUT

This project was reviewed by the Architectural Review Board on February 13, 2020. At that meeting, the Board made a motion to forward the project to the Planning Commission presented with the following condition:

- Introduce additional coordination (material, color, texture, etc.) with the front elevation and the east and west elevations with particular attention along Olive Street Road frontage.

The applicant has since responded with an updated submittal that captures this consideration. The stepping concrete walls from the initial submittal to the ARB have been replaced with Alucobond metal panels in a silver metallic finish. The project incorporates additional coordination between the northern façade and the eastern and western facades by adding an additional steel canopy to the northwest corner of the building. A recessed window has also been added to the northwest corner which allows for the metal panels to wrap around the west corner. The metal panels also wrap around the northeast corner of the building. Finally, a decorative aluminum guardrail has been added to the east elevation for human scale.

Figure 6: North elevations

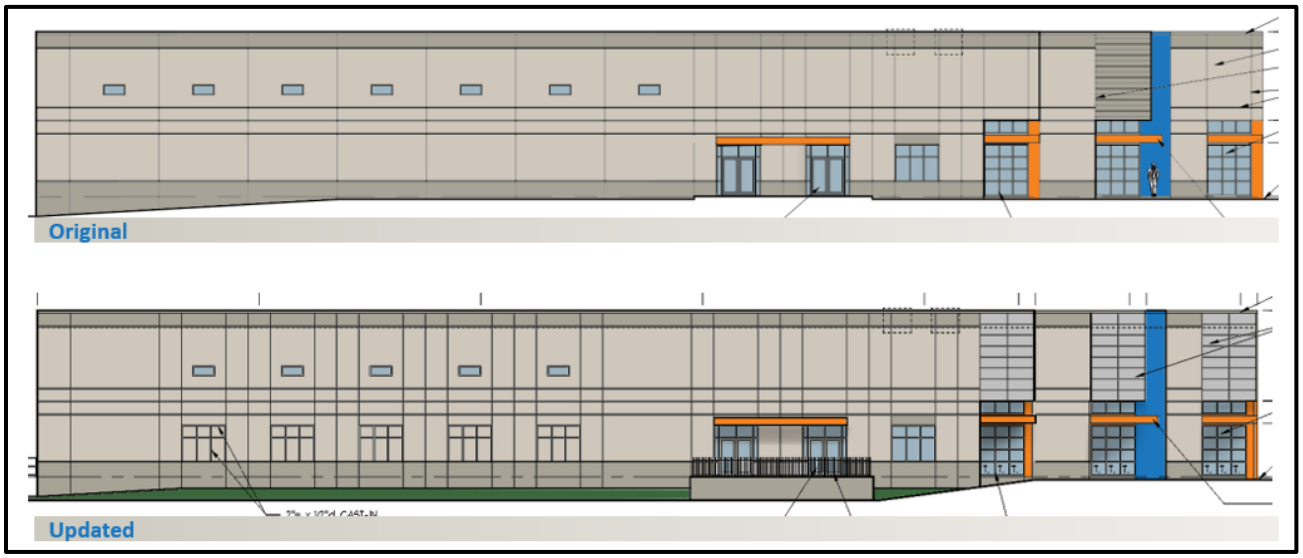

Figure 7: West elevations

STAFF RECOMENDATION

Staff has reviewed the Site Development Section Plan, Landscape Plan, Lighting Plan, Architectural Elevations, and Architect's Statement of Design and has found the proposal to be in compliance with the site specific ordinance, Comprehensive Plan, and City Code requirements. Staff recommends approval of the proposed development.

MOTION

The following options are provided to the Planning Commission for consideration relative to this application:

1) "I move to approve (or deny) the Site Development Section Plan, Landscape Plan, Lighting Plan, Architectural Elevations, and Architect's Statement of Design for Spirit Valley Business Park, Lot 1 (Neff Power).

2) "I move to approve (or deny) the Site Development Section Plan, Landscape Plan, Lighting Plan, Architectural Elevations, and Architect's Statement of Design for Spirit Valley Business Park, Lot 1 (Neff Power) with the following conditions…"

DESCRIPTION

The Galleon™ LED luminaire delivers exceptional performance in a highly scalable, low-profile design. Patented, high-efficiency AccuLED Optics™ system provides uniform and energy conscious illumination to walkways, parking lots, roadways, building areas and security lighting applications. IP66 rated and UL/cUL Listed for wet locations.

Catalog #		Type
Project

SPECIFICATION FEATURES

Construction
Extruded aluminum driver enclosure thermally isolated from Light Squares for optimal thermal performance. Heavy-wall, die-cast aluminum end caps enclose housing and die-cast aluminum heat sinks. A unique, patent pending interlocking housing and heat sink provides scalability with superior structural rigidity. 3G vibration tested and rated. Optional tool-less hardware available for ease of entry into electrical chamber. Housing is IP66 rated.

Optics
Patented, high-efficiency injection-molded AccuLED Optics technology. Optics are precisely designed to shape the distribution maximizing efficiency and application spacing. AccuLED Optics create consistent distributions with the scalability to meet customized application requirements. Offered standard in 4000K (+/- 275K) CCT 70 CRI. Optional 3000K, 5000K and 6000K CCT.

Electrical
LED drivers are mounted to removable tray assembly for ease of maintenance. 120-277V 50/60Hz, 347V 60Hz or 480V 60Hz operation. 480V is compatible for use with 480V Wye systems only. Standard with 0-10V dimming. Shipped standard with Eaton proprietary circuit module designed to withstand 10kV of transient line surge. The Galleon LED luminaire is suitable for operation in -40°C to 40°C ambient environments. For applications with ambient temperatures exceeding 40°C, specify the HA (High Ambient) option. Light Squares are IP66 rated. Greater than 90% lumen maintenance expected at 60,000 hours. Available in standard 1A drive current and optional 600mA, 800mA and 1200mA drive currents (nominal).

Mounting
STANDARD ARM MOUNT: Extruded aluminum arm includes internal bolt guides allowing for easy positioning of fixture during mounting. When mounting two or more luminaires at 90° and 120° apart, the EA extended arm may be required. Refer to the arm mounting requirement table. Round pole adapter included. For wall mounting, specify wall mount bracket option. QUICK MOUNT ARM: Adapter is bolted directly to the pole. Quick mount arm slide into place on the adapter and is secured via two screws, facilitating quick and easy installation. The versatile, patent pending, quick mount arm accommodates multiple drill patterns ranging from 1-1/2" to 4-7/8". Removal of the door on the quick mount arm enables wiring of the fixture without having to access the driver compartment. A knock-out enables round pole mounting.

Finish
Housing finished in super durable TGIC polyester powder coat paint, 2.5 mil nominal thickness for superior protection against fade and wear. Heat sink is powder coated black. Standard housing colors include black, bronze, grey, white, dark platinum and graphite metallic. RAL and custom color matches available.

Warranty
Five-year warranty.

CONTROL OPTIONS

0-10V (DIM)
This fixture is offered standard with 0-10V dimming driver(s). The DIM option provides 0-10V dimming wire leads for use with a lighting control panel or other control method.

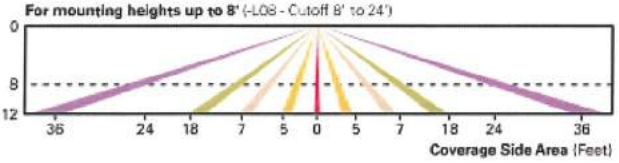
Photocontrol (P, R and PER7)
Optional button-type photocontrol (P) and photocontrol receptacles (R and PER7) provide a flexible solution to enable "dusk-to-dawn" lighting by sensing light levels. Advanced control systems compatible with NEMA 7-pin standards can be utilized with the PER7 receptacle.

After Hours Dim (AHD)
This feature allows photocontrol-enabled luminaires to achieve additional energy savings by dimming during scheduled portions of the night. The dimming profile will automatically take effect after a "dusk-to-dawn" period has been calculated from the photocontrol input. Specify the desired dimming profile for a simple, factory-shipped dimming solution requiring no external control wiring. Reference the After Hours Dim supplemental guide for additional information.

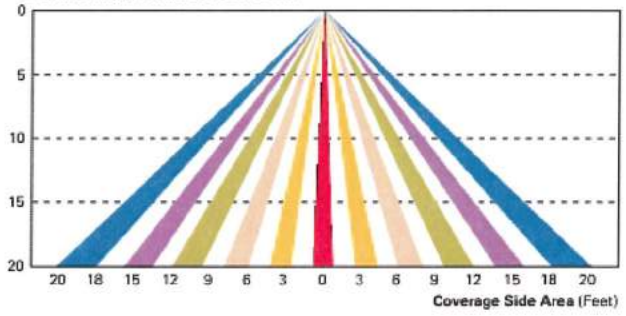
Dimming Occupancy Sensor (MS/DIM-LXX, MS/X-LXX and MS-LXX)
These sensors are factory installed in the luminaire housing. When the MS/DIM-LXX sensor option is selected, the occupancy sensor is connected to a dimming driver and the entire luminaire dims when there is no activity detected. When activity is detected, the luminaire returns to full light output. The MS/DIM sensor is factory preset to dim down to approximately 50 percent power with a time delay of five minutes. The MS-LXX sensor is factory preset to turn the luminaire off after five minutes of no activity. The MS/X-LXX is also preset for five minutes and only controls the specified number of light engines to maintain steady output from the remaining light engines.

These occupancy sensors includes an integral photocell that can be activated with the FSIR-100 accessory for "dusk-to-dawn" control or daylight harvesting - the factory preset is OFF. The FSIR-100 is a wireless tool utilized for changing the dimming level, time delay, sensitivity and other parameters. A variety of sensor lens are available to optimize the coverage pattern for mounting heights from 8'-40'.

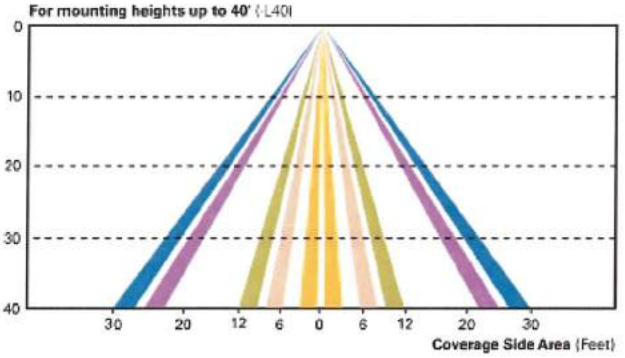
For mounting heights up to 8' (-L08 - Cutoff 8' to 24')



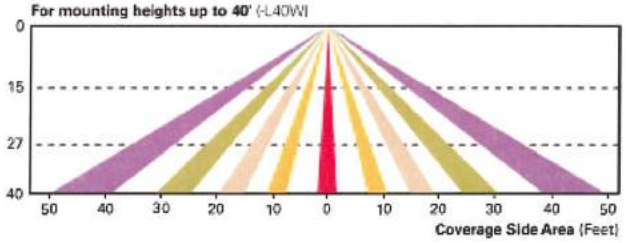
For mounting heights up to 20' (-L20)



For mounting heights up to 40' (-L40)

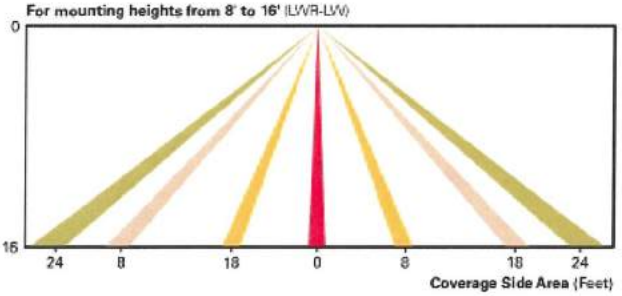


For mounting heights up to 40' (-L40W)

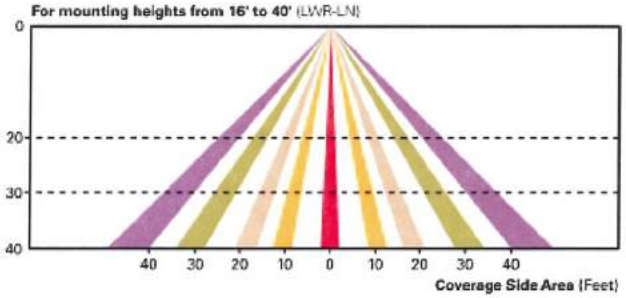


LumaWatt Pro Wireless Control and Monitoring System (LWR-LW and LWR-LN)
The Eaton's LumaWatt Pro powered by Enlighted is a connected lighting solution that combines a broad selection of energy-efficient LED luminaires with a powerful integrated wireless sensor system. The sensor controls the lighting system in compliance with the latest energy codes and collects valuable data about building performance and use. Software applications turn the granular data into information through energy dashboards and specialized apps that make it simple and help optimize the use of building resources, beyond lighting.

For mounting heights from 8' to 16' (LWR-LW)



For mounting heights from 16' to 40' (LWR-LN)



WaveLinx Wireless Outdoor Lighting Control Module (WOLC-7P-10A)
The 7-pin wireless outdoor lighting control module enables WaveLinx to control outdoor area, site and flood lighting. WaveLinx controls outdoor lighting using schedules to provide ON, OFF and dimming controls based on astronomic or time schedules based on a 7 day week.

LumenSafe Integrated Network Security Camera (LD)
Eaton brings ease of camera deployment to a whole new level. No additional wiring is needed beyond providing line power to the luminaire. A variety of networking options allows security integrators to design the optimal solution for active surveillance. As the ideal solution to meet the needs for active surveillance, the LumenSafe integrated network camera is a streamlined, outdoor-ready fixed dome that provides HDTV 1080p video. This IP camera is optimally designed for deployment in the video management system or security software platform of choice.

NOTES:
1 Customer is responsible for engineering analysis to confirm pole and fixture compatibility for all applications. Refer to our white paper WP513001EN for additional support information. **2** DesignLights Consortium® Qualified. Refer to www.designlights.org Qualified Products List under Family Models for details. **3** Standard 4000K CCT and minimum 70 CRI. **4** Not compatible with MS/4-LXX or MS/1-LXX sensors. **5** Not compatible with extended quick mount arm (QMEA). **6** Not compatible with standard quick mount arm (QM) or extended quick mount arm (QMEA). **7** Requires the use of an internal step down transformer when combined with sensor options. Not available with sensor at 1200mA. Not available in combination with the HA high ambient and sensor options at 1A. **8** Only for use with 480Y Wye systems. Per NEC, not for use with ungrounded systems, impedance grounded systems or corner grounded systems (commonly known as Three Phase Three Wire Delta, Three Phase High Leg Delta and Three Phase Corner Grounded Delta systems). **9** May be required when two or more luminaires are oriented on a 90° or 120° drilling pattern. Refer to arm mounting requirement table. **10** Factory installed. **11** Maximum 8 light squares. **12** Maximum 6 light squares. **13** Extended lead times apply. Use dedicated IES files for 2700K, 3000K, 5000K and 6000K when performing layouts. **14** Reserved **15** 1 Amp standard. Use dedicated IES files for 600mA, 800mA and 1200mA when performing layouts. **16** Not available with HA option. **17** 2L is not available with MS, MS/X or MS/DIM at 347V or 480V. 2L in AF-02 through AF-04 requires a larger housing, normally used for AF-05 or AF-06. Extended arm option may be required when mounting two or more fixtures per pole at 90° or 120°. Refer to arm mounting requirement table. **18** Not available with LumaWatt Pro wireless sensors. **19** Cannot be used with other control options. **20** Low voltage control lead brought out 18" outside fixture. **21** Not available if any "MS" sensor is selected. Motion sensor has an integral photocell. **22** Requires the use of P photocontrol or the PER7 or R photocontrol receptacle with photocontrol accessory. See After Hours Dim supplemental guide for additional information. **23** 50°C lumen maintenance data applies to 600mA, 800mA and 1A drive currents. **24** The FSIR-100 configuration tool is required to adjust parameters including high and low modes, sensitivity, time delay, cutoff and more. Consult your lighting representative at Eaton for more information. **25** Replace X with number of Light Squares operating in low output mode. **26** LumaWatt Pro wireless sensors are factory installed only requiring network components LWP-EM-1, LWP-GW-1 and LWP-PoE8 in appropriate quantities. See www.eaton.com/lighting for LumaWatt Pro application information. **27** Not available with house side shield (HSS). **28** Only for use with SL2, SL3, SL4 and AFL distributions. The Light Square trim plate is painted black when the HSS option is selected. **29** CE is not available with the LWR, MS, MS/X, MS/DIM, P, R or PER7 options. Available in 120-277V only. **30** One required for each Light Square. **31** Requires PER7. **32** Reserved. **33** WAC Gateway required to enable field configurability: Order WAC-PoE and WPDE-120 (10V to PoE injector) power supply if needed. **34** Requires ZW. **35** Reserved.

LumenSafe Integrated Network Security Camera Technology Options (Add as Suffix)

Product Family	Camera Type	Data Backhaul	
L=LumenSafe Technology®	**D**=Dome Camera, Standard **H**=Dome Camera, Hi-Res **Z**=Dome Camera, Remote PTZ	**C**=Cellular, Customer Installed SIM Card **A**=Cellular, Factory Installed AT&T SIM Card **V**=Cellular, Factory Installed Verizon SIM Card **S**=Cellular, Factory Installed Sprint SIM Card	**W**=Wi-Fi Networking w/ Omni-Directional Antenna **E**=Ethernet Networking

*Consult LumenSafe system pages for additional details and compatibility.

Re: Architectural Statement
Submittal for Approval of New Facility on Adjusted Lot 1.
NEFF Power – 669 Spirit Valley Central Drive

General Requirements for Site Design

This project consists of a single-story office/factory/warehouse building designed for a single tenant. The site is located at an entry of Spirit Valley Business Park on the west side of Spirit Valley Central Drive and south side of Olive Street Road on the far west side of Chesterfield. The owner of this building is moving his hi-tech robotics headquarters from Earth City to Chesterfield Valley.

Site Relationships:

As you can see from the photos in this packet, the rectangular site is treeless and generally flat other than the drainage ditch and is otherwise featureless. The building is strategically located on the site to be compatible with the existing drainage system for the development and congruous with the other buildings in the development.

The approved concept plan for the entire development shows a 5' wide side walk on the west side of Spirit Valley Central Drive to provide pedestrian circulation. While we cannot control future development of neighboring sites, this specific site design allows cross access with the neighbor to the south.

We are not proposing the use of fencing at this time.

Landscaping is designed per city ordinance in a fashion similar to the adjacent developments. Please see attached landscape plan.

General Requirements for Building Design

The intent of the design is to project the high quality, high-tech image of the users robotics products. This design states "the future is built here". The front (north) elevation is articulated with stepping concrete walls with rhythmically pleasing reveal patterns highlighted with glass and aluminum and a striking blue slashing accent. The tilt-up concrete walls cast great shadows, adding depth, complexity and a sense of place for the entry. The reveals and glass extend around each side (west & east) corner to give a sense of pattern and encourage one to explore the building further.

The south building face is articulated with recessed reveals, high windows in a rhythmic pattern and pleasing to the eye. The building will utilize earth tone colors, clear and tinted glass windows and metal canopies. The colors, glass and metal items are juxtaposed on the façades of the building to create an interesting overall building design. This includes a stark blue slash to draw attention to the main entry to the building.

All sides of this building are treated in the same fashion with design reveals, glass and aluminum windows and earth tone paints. The building materials are the same as all of the other buildings in this park, but are being used in more design appropriate ways to deliver an aesthetically pleasing solution. A special coating designed specifically for concrete will protect the concrete panels. The flat roof is covered with a TPO membrane and slopes to scuppers on the west elevation.

The windows for this project, in keeping with its strong design theme, are non-operable and are energy compliant windows. The glass is an effective design element in the elevational articulation.

The design is respectful of the surrounding development in general and is harmonious in scale, material, and color. Nearby buildings are also constructed of tilt-up concrete and/or earth tone colors and materials similar to ours.

Site lighting is planned to be three light standards in the front of the building (north) along Olive Street Road and two light standards at the back of the building (south) along the south property line. A wall-mounted fixture will accent the south side. This lighting will not shine off of the Owners property in an unnecessary fashion.

Please see the site development section plan for drainage information.

The proposed HVAC system is planned to be roof mounted.

Specific Requirements for the Chesterfield Valley

As stated above we encompass the building with reveals and colors for continuity while highlighting the visible front with metal canopies and glass. The trash receptacle will be screened from public view with tilt-up concrete to coordinate with the building.

The electrical service will be provided by a new transformer located near the southwest corner of the building south of the building and will receive vegetation to screen the units. All utilities to this building are underground.

I-64/US-40 is to the north of this property and is not readily visible from the property. Automobile parking is north and a few south of the building and the service/loading area is on the south side of the building.

Street lighting is included in this project to match the existing industrial park street lighting and is located to the east of the building along Sprit Valley Central Drive.

It remains our intention to provide a design that will enhance the local environment while blending with the building types already in Spirit Valley Central Drive. The owner is excited about providing a new quality designed facility for the City of Chesterfield.

Thank you for your assistance.

As required, building materials will be brought to the ARB meeting and will include:

- Glass and frame sample
- Color samples of the concrete coatings

Re: Third Submittal – Revised Elevations per ARB comments
Resubmitted per email from Annisa Kumerow dated 03-06-2020
Submittal for Approval of revised elevational design adding a third material.
NEFF Power – 669 Spirit Valley Central Drive

Annisa,

Per your email mentioned above, we are submitting one hard copy of the revisions containing the following items per your email.

- *Statement of Design*
- *SDSP*
- *Lighting Plan and Cutsheets*
- *Landscape Plan*
- *Elevations*

The new design includes revisions based on the response received from the city as follows:

1. *Given that the building is on a major thoroughfare, particular attention should be paid to the materials:*
    a. *A new material of a better quality should be introduced on the primary façade*
    b. *This new material should translate to both sides of the building and,*
    c. *The new material should transition at logical points along the facades*
2. *Additionally, the reduction of glass is not of benefit to the design.*

RESPONSE:

1. We have chosen to add Alucobond, a composite aluminum faced panel system, as the third material on the front elevation which we had re-designed a bit to allow this third material to wrap to the east and west elevations.

   In order to do this, we added the recessed corner window and canopy detail to the northwest corner, which now matches the other corners on the 'front' elevation. Alucobond is a high-quality system that will add another level of high-tech innovation to this building.

2. The reduction in glass mentioned in the city comments refers to the elimination and/or relocation of some of the small 'high' windows on the east, west and south elevations. The numbers changed from 23 small windows on the three elevations to 10 only on the east and south elevations. This change was due partially to some of the windows conflicting with internal elements on the plan and partially due to the owner's desire to de-clutter the elevations. This change was actually made prior to the ARB meeting but after the ARB submittal. When the re-submittal was made, the re-designed elevations with the fewer windows was simply used. We realize that we should have called this change out, and our neglecting to do this was simply an oversight.

   The Owner has stated that we can add some back in if that is the desire of staff. At this point, the windows were not added back in.

Thanks again for taking the time to meet with us to resolve the design of this building. as we discussed, we were certainly not ignoring the ARB comments, we just mis-understood them.

Please let us know if you require anything further.

Neff Power Bio

Neff Power is a Robotics and High-Tech Automation distributor that represents innovative, top manufacturers bringing products and solutions to OEM, End User, and Integrator customers in the manufacturing and warehouse distribution markets.

Neff Power has been in business since 1965 and was purchased by Kent and Loretto Wemhoener eight years ago. Since 2012, Neff Power has achieved unprecedented growth and has expanded from the St. Louis market to eight states while opening offices in Kansas City, Phoenix, and Dallas.

Neff Power is the largest volume US distributor for Yaskawa Robotics, one of the top 3 worldwide robot manufacturers. Neff Power is an ISO 9001:2015 registered company focused on continually improving company processes and offerings to provide the best service to its diversified customers. The management team has increased the technical staff of Application and Design Engineers from two to fourteen to add value to its customers. Neff Power has developed a robust online web store and App downloadable through Apple and Google.

Neff Power chose the Chesterfield location to build its new St. Louis Headquarters because we believe Chesterfield is a great investment for the future and is an innovative community that is attractive to a high-tech business such as ours.

Total Site Area = 128,008 s.f. (2.893 acres)

Note: Existing tree canopy is within existing and proposed easement areas.

Tree Inventory							
ID	Tree Name	DBH	Canopy Diam.	Condition Rating	Comment	Preserved	To Be Removed
1	Hackberry	24	35	1	Twin		X
2	Crabapple	10	30	3	Offsite, triple	X	
3	Pecan	12	36	3	Offsite	X	
4	Pecan	16	40	3	Offsite	X	
5	Pecan	14	35	3	Offsite	X	
6	Maple	10	15	2	Two-stem		X
7	Maple	10	18	2	Two-stem		X
8	Maple	12	15	1	Three-stem		X
9	Maple	12	20	1	Two-stem		X
10	Maple	6	15	1			X
11	Cottonwood	10	20	2	Three-stem		X
12	Cottonwood	12	20	2			X
13	Cottonwood	12	15	2	Three-stem		X
14	Cottonwood	20	25	2	Triple		X

Condition Rating:
0 = Dead
1 = In Decline
2 = Poor Quality
3 = Fair Quality
4 = Good Quality
5 = Excellent Quality

Tree Protection Notes:

1) Pre-construction meeting to be held on-site to include a presentation of tree protection measures to operators, construction supervisors, developer's representative, and city zoning inspector.

2) Clearing limits shall be rough staked or marked by the Applicant's surveyor in order to facilitate location for trenching and fencing installation.

3) No clearing or grading shall begin in areas where tree treatment, preservation, and protection measures have not yet been completed including the installation of tree protection fencing as shown on the plan. Where necessary, Contractor may perform minor tree clearing prior to installing silt fencing and tree protection fencing provided they maintain tree protection area.

4) Tree Protection Fencing shall be 4-foot high temporary plastic construction fence. No equipment traffic/parking, concrete washout, material storage or other such construction activity shall be permitted to penetrate the protection fencing or disrupt the Protected Woodland Area except for the removal of dead or invasive plant material. All ground plane in planting areas shall be mulched with hardwood bark mulch. Tree Protection Signage will be placed along the Protection Fencing as shown as the dashed line on the plan.

5) Tree protection measures to be maintained throughout construction sequence.

Tree Protection Action Key Sequence:

1) Survey limit of disturbance.
2) Perform root pruning.
3) Install tree protection fencing.
4) Post tree protection signage on fence. (No signs will be posted on trees).
5) Maintain tree protection area as an off-limits zone.
