Architectural Review Board Staff Report

Project Type: Site Development Section Plan

Meeting Date: April 13, 2017

From: Jessica Henry, AICP

Senior Planner

Location: North side of North Outer 40 Road and west of Boone's Crossing

Applicant: McBride & Son Homes/ACI Boland Architects

Description: Larry Enterprises Lynch Hummer, Parcel 1 (McBride Design Center): A Site

Development Section Plan, Landscape Plan, Lighting Plan, Architectural Elevations and Architect's Statement of Design for a 3.107 acre tract of land zoned "PI" Planned Industrial District located north of North Outer 40 Road

and west of Boone's Crossing.

PROPOSAL SUMMARY

The request is for a 10,000 +/- square foot showroom building located on the north side of North Outer 40 Road and west of Boone's Crossing. The site will house the McBride & Son's Homes Design Center which will ultimately consist of one building built in two phases. The current proposal is for the first phase of construction. The subject site is zoned "PI" Planned Industrial District and is governed under the terms and conditions of City of Chesterfield Ordinance Number 2055. The exterior building materials will be primarily comprised of painted concrete tilt up and stone and brick veneer. Rooftop mechanical equipment will be screened by the front and side parapet walls.

HISTORY OF SUBJECT SITE

The site is currently vacant. In January of 2004, the City Council approved Ordinance 2055 to cover a 14.1 acre portion of land. This is the 3rd building to be built; this ordinance allows for a total of 4 buildings on the 14.1 acres. The other two buildings within this development are the Scott Retail and Heavy Duty Equipment buildings located on Lot B to the east of the subject site.

Figure 1: Proposed location of McBride Design Center (lots not drawn to scale/approximated)

STAFF ANALYSIS

General Requirements for Site Design:

The subject site is located along North Outer 40 Road. The proposed building is oriented parallel to the adjacent arterial roadway and slightly forward of the adjacent existing building. Given this orientation, the front and east side of the building will be visible to motorists traveling from the east. Since the site to the west is currently undeveloped, the building will be visible to motorists traveling from the west.

Figure 2: Color Architectural Site Plan excerpt

Circulation System and Access

The subject site will be served by one new dedicated entrance from North Outer 40 Road. A cross access easement extends to the western edge of the property allowing for future developments to utilize new entrance. the Additionally, this easement connects to the existing portions of the development to the east, which also have dedicated entrance allowing for a second access point.

Topography, Retaining Walls, and Parking

The site is generally flat. No retaining walls are proposed at this time.

Parking is located along the southern and western portion of the proposed building. The Chesterfield Valley Design Requirements state that parking should be located "primarily to the side or rear of any building facade facing I-64/US 40 or along North Outer 40." While this site does have parking along the building façade facing North Outer 40, it has less parking to the south than the existing neighboring properties with only one row along the front of the building.

General Requirements for Building Design:

A. Scale

The proposed building is one story, with top of wall being 20' in height. The building's parapets vary in height, with the tallest being the front parapet at 28'. The submitted renderings and elevations show how material changes and design elements are included on the front elevation to add a human scale to the design.

Figure 3: Southwest perspective

B. Design

The south façade has the largest variation in height, articulation, and design aspects with the tallest parapet wall, stone and brick veneer over the concrete tilt up walls and window canopies. The east and west façades have some veneer and some top of wall height differences. The north façade has the least amount of variety along it, being all painted concrete panel tilt up wall.

The following Chesterfield Valley Sub-Area Policy and Chesterfield Valley Design Policies are relevant to this development:

<u>Building Facades</u>: Utilize architectural elements from the front façade on the side and rear of the structure. The north façade does not carry design elements from the other façades around. At the present time this façade will be highly visible from the Chesterfield Monarch Levee Trail system; however, ultimately this building will be linked to an addition and the rear elevation will face an

interior courtyard area. With the current proposal, the rear building area will be paved and utilized for a loading area. It is unclear at this time if this area will be converted to a landscaped courtyard with the construction of the building addition in phase 2 of the development, and if so, what the specific details of that design will be.

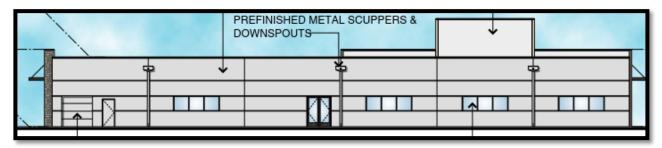

Figure 4: North elevation

C. Materials and Color

The proposed materials include natural stacked stone, honed concrete masonry, composite panels, and EIFS. The color palette consists of neutral tones.

D. Landscape Design and Screening

Several different areas of landscaping are proposed in accordance with City Code requirements. These include street trees along the site's frontage, a 30 foot landscape buffer behind the stormwater conveyance channel, and parking lot landscaping. Bio-retention and swale areas will be planted with native plantings to fulfill water quality requirements on the site.

Note that the rear portion of the site does not contain any plantings; this is due to the proximity of the levee and associated seepage berm.

Rooftop mechanical equipment is included on the building and the applicant has indicated that it will be screened by the parapet walls. Finally, an enclosure constructed of painted concrete paneling will screen the trash receptacles from public view.

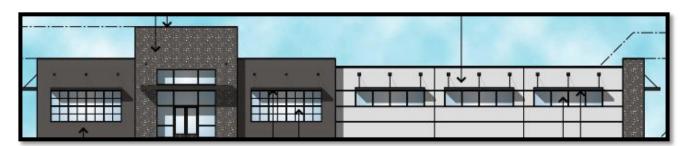

Figure 5: South elevation

E. Signage

Signage is not part of the proposal before the Architectural Review Board and will be reviewed separately.

F. Lighting

Site lighting is proposed for the parking fields as required by City Code. Three building mounted fixtures are proposed along the south façade. These fixtures are utilitarian in nature and feature fully shielded, flat lens, enclosed luminaires.

DEPARTMENT INPUT

Be advised, this project is still going through development review by City Staff and will not proceed to the Planning Commission until all outstanding items have been addressed. All recommendations made by the ARB will be included in Staff's report to the Planning Commission.

Staff requests review and recommendation on this submittal for Larry Enterprises Lynch Hummer, Parcel 1 (McBride Design Center).

MOTION

The following options are provided to the Architectural Review Board for consideration relative to this application:

- "I move to forward the Site Development Section Plan, Landscape Plan, Lighting Plan, Architectural Elevations, and Architect's Statement of Design for Larry Enterprises Lynch Hummer, Parcel 1 (McBride Design Center) as presented, with a recommendation for approval (or denial) to the Planning Commission."
- 2) "I move to forward the Site Development Section Plan, Landscape Plan, Lighting Plan, Architectural Elevations, and Architect's Statement of Design for Larry Enterprises Lynch Hummer, Parcel 1 (McBride Design Center) to the Planning Commission with the following recommendations..."

Re: McBride & Son Homes Design Center - Chesterfield, Missouri

ACI Boland Architects Project No. 217501

Dear Ms. Henry:

We are pleased to submit the following project to The City of Chesterfield Architectural Review Board for their consideration. We have included in this Statement of Design listed below regarding how we plan to address each of the pertinent design standards as part of the design submittal requirements.

STATEMENT OF DESIGN INTENT

General Requirements for Site Design

Site Relationship

The building is situated on North Outer Forty Road west of Boone's Crossing. The building entrance will face North Outer Forty Road to the south. The entrance to this development will utilize the single curb-cut entrance on North Outer Forty Road. We are also planning to utilize the previously established cross-access agreement with the property to the east to allow the flow of traffic between developments.

Circulation System and Access

The building is situated in the middle of the site with drive access on three of the four sides to allow for free circulation and no "dead-end" drive lanes. The visitor parking is located on the south side of the site. The accessible parking spaces are located on the west side of the building allowing easy and safe access without needing to cross any drive lanes. The employee and other remaining parking is located along the west and south side of the building.

Topography

The existing site is relatively flat and vacant. A portion of the Monarch Levee is located at the northern end of the buildable site. The site has no substantial vegetation worth retaining currently.

Retaining Walls

We are currently not proposing the use or need of any site retaining walls in this project at this time.

March 15, 2017 Jessica Henry City of Chesterfield ACI Boland Architects Proposal No. 217501 Page 2

General Requirements for Building Design

Scale

This single story building is designed to complement the existing buildings to the east. Since this building is to be smaller in size the scale and proportions have also been reduced to fit better with the adjacent development.

Design

This building will be a single story residential design center development with brick veneer, masonry stone veneer elements and glass and aluminum windows. All four faces of the building will be coordinated in regards to the material and detailing.

Materials and Colors

The exterior design will be painted concrete tilt panels along with brick and stone veneer façade accents. The stone and brick will continue around the west and east sides of the building. We are also planning to use a prefinished metal canopy at the main entrance and the exterior sunshades above the windows on the three main elevations. The window openings will be insulated tinted glass in prefinished aluminum storefront.

Please refer to the exterior rendering and the larger material samples to be submitted at the Architectural Review board meeting.

Landscape Design and Screening

The site has been carefully landscaped with trees and other scrubs/plantings to compliment the scale and reduce the impact of the parking area and building to North Outer Forty Road. We have also considered the existing site to the east in our selections of plant material to create a consistent look of the other developments. The building will also include a landscaped area near the front doors to create an inviting plaza area for the patrons. We have also landscaped the Metropolitan Sewer District's required water quality sand bed filter on the south-side of the site to compliment the entire development and pleasing to the passing vehicular traffic. Unfortunately, the north side of our site is located inside the Monarch Levee under-seepage berm easement so we are unable to plant any landscaping within this area.

Please refer to the submitted Landscape Plan for more information.

The building's trash container will be screened from vision by the use of an integral enclosure to the building. The enclosure will be constructed to give the feel of a unified consistent appearance through the use of matching materials. The enclosure will have composite wood sight-proof swing gates that will face to the west, away from all of the major pedestrian and vehicle traffic to the south.

March 15, 2017 Jessica Henry City of Chesterfield ACI Boland Architects Proposal No. 217501 Page 3

Signage

We understand that signage review is not part of this process and is will be reviewed at a later date once the owner has selected signage for their building. Any signage submitted at that time will be designed to meet the City of Chesterfield Code.

Lighting

The site lighting has been carefully designed. See the submitted lighting plan and the referenced fisture cut-sheets for your reference.

Once again, we are please to be continuing our relationship with the City of Chesterfield through the development of your wonderful city. If should need any additional information or have questions, please feel free to call me.

Respectfully Submitted,

ACI Boland Architects

The Galleon™ LED luminaire delivers exceptional performance in a highly scalable, low-profile design. Patented, high-efficiency AccuLED Optics™ system provides uniform and energy conscious illumination to walkways, parking lots, roadways, building areas and security lighting applications. IP66 rated and UL/cUL Listed for wet locations.

SPECIFICATION FEATURES

Construction

Extruded aluminum driver enclosure thermally isolated from Light Squares for optimal thermal performance. Heavy-wall, diecast aluminum end caps enclose housing and die-cast aluminum heat sinks. A unique, patent pending interlocking housing and heat sink provides scalability with superior structural rigidity. 3G vibration tested and rated. Optional tool-less hardware available for ease of entry into electrical chamber. Housing is IP66 rated.

Optics

Patented, high-efficiency injection-molded AccuLED Optics technology. Optics are precisely designed to shape the distribution maximizing efficiency and application spacing. AccuLED Optics create consistent distributions with the scalability to meet customized application requirements. Offered standard in 4000K (+/- 275K) CCT 70 CRI. Optional 3000K, 5000K and 6000K

Electrical

LED drivers are mounted to removable tray assembly for ease of maintenance. 120-277V 50/60Hz, 347V 60Hz or 480V 60Hz operation. 480V is compatible for use with 480V Wye systems only. Standard with 0-10V dimming. Shipped standard with Eaton proprietary circuit module designed to withstand 10kV of transient line surge. The Galleon LED luminaire is suitable for operation in -40°C to 40°C ambient environments. For applications with ambient temperatures exceeding 40°C, specify the HA (High Ambient) option. Light Squares are IP66 rated. Greater than 90% lumen maintenance expected at 60,000 hours. Available in standard 1A drive current and optional 600mA. 800mA and 1200mA drive currents (nominal).

Mounting

STANDARD ARM MOUNT: Extruded aluminum arm includes internal bolt guides allowing for easy positioning of fixture during mounting. When mounting two or more luminaires at 90° and 120° apart, the EA extended arm may be required. Refer to the

arm mounting requirement table. Round pole adapter included. For wall mounting, specify wall mount bracket option. QUICK MOUNT ARM: Adapter is bolted directly to the pole. Quick mount arm slide into place on the adapter and is secured via two screws, facilitating quick and easy installation. The versatile, patent pending, quick mount arm accommodates multiple drill patterns ranging from 1-1/2" to 4-7/8". Removal of the door on the quick mount arm enables wiring of the fixture without having to access the driver compartment. A knock-out enables round pole mounting.

Finish

Housing finished in super durable TGIC polyester powder coat paint, 2.5 mil nominal thickness for superior protection against fade and wear. Heat sink is powder coated black. Standard housing colors include black, bronze, grey, white, dark platinum and graphite metallic. RAL and custom color matches available.

Warranty

Five-year warranty.

^{&#}x27; Nominal data for 70 CRI.

0-10V (DIM)

This fixture is offered standard with 0-10V dimming driver(s). The DIM option provides 0-10V dimming wire leads for use with a lighting control panel or other control method.

Photocontrol (P. R and PER7)

Optional button-type photocontrol (P) and photocontrol receptacles (R and PER7) provide a flexible solution to enable "dusk-to-dawn" lighting by sensing light levels. Advanced control systems compatible with NEMA 7-pin standards can be utilized with the PER7 receptacle.

After Hours Dim (AHD)

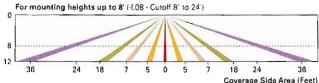

This feature allows photocontrol-enabled luminaires to achieve additional energy savings by dimming during scheduled portions of the night. The dimming profile will automatically take effect after a "dusk-to-dawn" period has been calculated from the photocontrol input. Specify the desired dimming profile for a simple, factory-shipped dimming solution requiring no external control wiring. Reference the After Hours Dim supplemental guide for additional information.

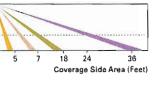

Dimming Occupancy Sensor (MS/DIM-LXX, MS/X-LXX and MS-LXX)

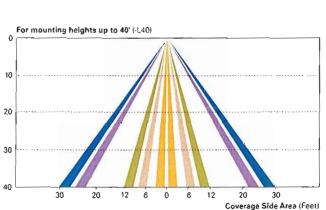

These sensors are factory installed in the luminaire housing. When the MS/DIM-LXX sensor option is selected, the occupancy sensor is connected to a dimming driver and the entire luminaire dims when there is no activity detected. When activity is detected, the luminaire returns to full light output. The MS/DIM sensor is factory preset to dim down to approximately 50 percent power with a time delay of five minutes. The MS-LXX sensor is factory preset to turn the luminaire off after five minutes of no activity. The MS/X-LXX is also preset for five minutes and only controls the specified number of light engines to maintain steady output from the remaining light engines.

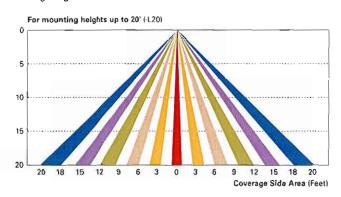

These occupancy sensors includes an integral photocell that can be activated with the FSIR-100 accessory for "dusk-to-dawn" control or daylight harvesting - the factory preset is OFF. The FSIR-100 is a wireless tool utilized for changing the dimming level, time delay, sensitivity and other parameters.

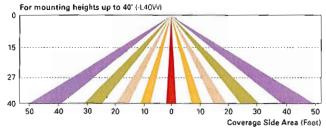

A variety of sensor lens are available to optimize the coverage pattern for mounting heights from 8'-40'.

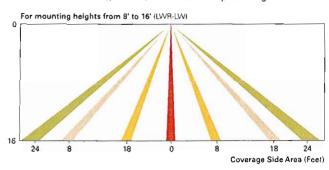

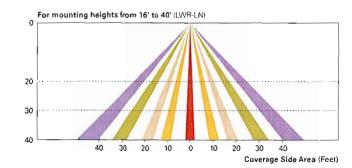

LumaWatt Wireless Control and Monitoring System (LWR-LW and LWR-LN)

The LumaWatt system is a peer-to-peer wireless network of luminaire-integral sensors for any sized project. Each sensor is capable of motion and photo sensing, metering power consumption and wireless communication. The end-user can securely create and manage sensor profiles with browser-based management software. The software will automatically broadcast to the sensors via wireless gateways for zone-based and individual luminaire control. The LumaWatt software provides smart building solutions by utilizing the sensor to provide easy-to-use dashboard and analytic capabilities such as improved energy savings, traffic flow analysis, building management software integration and more.

For additional details, refer to the LumaWatt product guides.

NOTES:

- 1. Customer is responsible for engineering analysis to confirm pole and fixture compatibility for all applications. Refer to our white paper WP513001EN for additional support information.
- 2. DesignLights Consortium²² Qualified. Refer to www.dasignlights.org Qualified Products List under Family Models for details.

 3. Standard 4000K CCT and minimum 70 CRI.
- 4. Not compatible with extended quick mount arm (QMEA).

- 4. Not compatible with standard quick mount arm (LMEA).
 5. Not compatible with standard quick mount arm (LMEA).
 6. Requires the use of an internal step down transformer when combined with sensor options. Not available with sensor at 1200mA. Not available in combination with the HA high ambient and sensor options at 1A.
 7. Only for use with 480V Wye systems. Per NEC, not for use with ungrounded systems, impedance grounded systems or corner grounded systems (commonly known as Three Phase Three Wire Delta, Three Phase High Leg Delta and Three Phase Corner Grounded Delta systems).
 8. May be required when two or more luminaires are oriented an a 90° or 120° drilling pattern. Refer to arm mounting requirement table.
 9. Factory installed.
 10. Maximum 8 libble squares.

- to. Maximum 8 light squares.
- 12. Maximum 6 light squares.

 12. Extended lead times apply. Use dedicated IES files for 3000K, 5000K and 6000K when performing layouts. These files are published on the Galleon luminaire product page on the website.

 13. Extended lead times apply. Use dedicated IES files for 3000K, 5000K and 6000K when performing layouts. These files are published on the Galleon luminaire product page on the website.

 14. I Amp standard. Use dedicated IES files for 800mA, 800mA and 1200mA when performing layouts. These files are published on the Galleon luminaire product page on the website.
- 14. I Amp standard. Use dedicated IES files for 600mA, 800mA and 1200mA when performing layouts. These files are published on the Galleon luminaire product page on the website.
 15. Not available with HA option.
 16. 2L is not available with MS, MS/X or MS/DIM at 347V or 480V. 2L in AF-02 through AF-04 requires a larger housing, normally used for AF-05 or AF-06. Extended arm option may be required when mounting two or more fixtures per pole at 90° or 120°. Refer to arm mounting requirement table.
 17. Not available with LumisWatt wireleass sensors.
 18. Requires the use of P photocontrol or the PER7 or R photocontrol receptacle with photocontrol accessory. See After Hours Dim supplemental guide for additional information.
 19. 50°C Lumen maintenance data applies to 600mA, 800mA and 1A drive currents.
 20. The FSIR-100 configuration tool is required to adjust parameters including high and flow modes, sensitivity, time delay, cutoff and more. Consult your lighting representative at Eaton for more information.
 21. Approximately 22° detection diameter at 8° mounting height.
 22. Approximately 60° detection diameter at 40° mounting height.
 23. Approximately 60° detection diameter at 40° mounting height.
 24. Approximately 60° detection diameter at 40° mounting height.
 24. Approximately 60° detection diameter at 40° mounting height.
 24. Approximately 60° detection diameter at 40° mounting height.

- 24. Approximately 100' detection diameter at 40' mounting height.
 25. Replace X with number of Light Squares operating in low output mode.
 26. LumaWatt wireless sensors are factory installed only requiring network components RF-EM-1, RF-GW-1 and RF-ROUT-1 in appropriate quantities. See www.eaton.com/lighting for LumaWatt application information.
 27. Not available with house side shield (HSS).
- 28. Only for use with SL2, SL3, SL4 and AFL distributions. The Light Square trim plate is painted black when the HSS option is selected.
 29. CE is not available with the LWR, MS, MS/X, MS/DIM, P, R or PER7 options. Available in 120-277V only
- 30. One required for each Light Square.

DESCRIPTION

The Galleon™ wall LED luminaire's appearance is complementary with the Galleon area and site luminaire bringing a modern architectural style to lighting applications. Flexible mounting options accommodate wall surfaces in both an upward and downward configuration. The Galleon family of LED products deliver exceptional performance with patented, high-efficiency AccuLED Optics™, providing uniform and energy conscious lighting for parking lots, building and security lighting applications.

Catalog #	Туре

SPECIFICATION FEATURES

Construction

Driver enclosure thermally isolated from optics for optimal thermal performance. Heavy wall aluminum housing die-cast with integral external heat sinks to provide superior structural rigidity and an IP66 rated housing. Overall construction passes a 1.5G vibration test to ensure mechanical integrity. UPLIGHTING: Specify with the UPL option for inverted mount uplight housing with additional protections to maintain IP rating.

Optics

Choice of thirteen patented, highefficiency AccuLED Optics. The
optics are precisely designed to
shape the distribution maximizing
efficiency and application spacing.
AccuLED Optics create consistent
distributions with the scalability
to meet customized application
requirements. Offered standard in
4000K (+/- 275K) CCT and minimum
70 CRI. Optional 3000K, 5000K
and 6000K CCT. Greater than 90%

lumen maintenance expected at 60,000 hours. Available in standard 1A drive current and optional 1200mA, 800mA, and 600mA drive currents.

Electrical

LED drivers are mounted for ease of maintenance. 120-277V 50/60Hz, 347V or 480V 60Hz operation. 480V is compatible for use with 480V Wye systems only. Drivers are provided standard with 0-10V dimming. An optional Eaton proprietary surge protection module is available and designed to withstand 10kV of transient line surge. The Galleon Wall LED luminaire is suitable for operation in -30°C to 40°C ambient environments. For applications with ambient temperatures exceeding 40°C, specify the HA (High Ambient) option. Emergency egress options for -20°C ambient environments and occupancy sensor available.

Mounting

Gasketed and zinc plated rigid steel mounting attachment fits directly to 4" j-box or wall with the Galleon Wall "Hook-N-Lock" mechanism for quick installation. Secured with two captive corrosion resistant black oxide coated allen head set screws which are concealed but accessible from bottom of fixture.

Finish

Housing finished in super durable TGIC polyester powder coat paint, 2.5 mil nominal thickness for superior protection against fade and wear. Standard colors include black, bronze, grey, white, dark platinum and graphite metallic. RAL and custom color matches available. Consult the McGraw-Edison Architectural Colors brochure for the complete selection.

Warranty

Five-year warranty.

0-10V

This fixture is offered standard with 0-10V dimming driver(s). The DIM option provides 0-10V dimming wire leads for use with a lighting control panel or other control method.

Photocontrol (P, R and PER7)

Optional button-type photocontrol (P) and photocontrol receptacles (R and PER7) provide a flexible solution to enable "dusk-to-dawn" lighting by sensing light levels. Advanced control systems compatible with NEMA 7-pin standards can be utilized with the PER7 receptacle.

After Hours Dim (AHD)

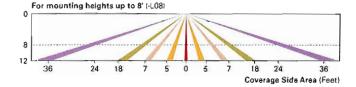

This feature allows photocontrol-enabled luminaires to achieve additional energy savings by dimming during scheduled portions of the night. The dimming profile will automatically take effect after a "dusk-to-dawn" period has been calculated from the photocontrol input. Specify the desired dimming profile for a simple, factory-shipped dimming solution requiring no external control wiring. Reference the After Hours Dim supplemental guide for additional information.

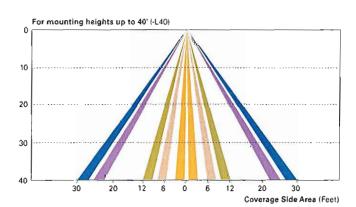

Dimming Occupancy Sensor (MS/DIM-LXX and MS-LXX)

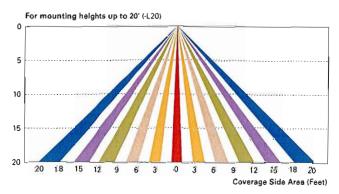

These sensors are factory installed in the luminaire housing. When the MS/DIM-LXX sensor option is selected, the occupancy sensor is connected to a dimming driver and the entire luminaire dims when there is no activity detected. When activity is detected, the luminaire returns to full light output. The MS/DIM sensor is factory preset to dim down to approximately 50 percent power with a time delay of five minutes. The MS-LXX sensor is factory preset to turn the luminaire off after five minutes of no activity. The MS/X-LXX is also preset for five minutes and only controls the specified number of light engines to maintain steady output from the remaining light engines.

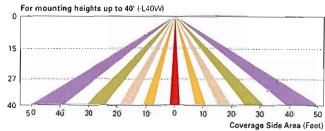

These occupancy sensors includes an integral photocell that can be activated with the FSIR-100 accessory for "dusk-to-dawn" control or daylight harvesting - the factory preset is OFF. The FSIR-100 is a wireless tool utilized for changing the dimming level, time delay, sensitivity and other parameters.

A variety of sensor lens are available to optimize the coverage pattern for mounting heights from 8'-40'.

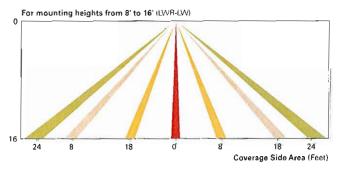

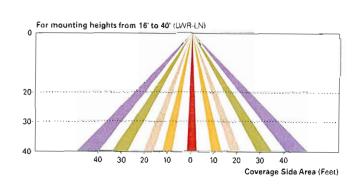

LumaWatt Wireless Control and Monitoring System (LWR-LW and LWR-LN)

The LumaWatt system is a peer-to-peer wireless network of luminaire-integral sensors for any sized project. Each sensor is capable of motion and photo sensing, metering power consumption and wireless communication. The end-user can securely create and manage sensor profiles with browser-based management software. The software will automatically broadcast to the sensors via wireless gateways for zone-based and individual luminaire control. The LumaWatt software provides smart building solutions by utilizing the sensor to provide easy-to-use dashboard and analytic capabilities such as improved energy savings, traffic flow analysis, building management software integration and more.

For additional details, refer to the LumaWatt product guides.

NOTES:

CE=CE Marking and Small Terminal Block 24

- NOTES:

 1. DesignLight Consortium™ Qualied Refer to www designlights.org Qualified Products List under Family Models for details.

 2. Standard 4000K CCT and minimum 70 CR).

 3. Two light squares with 888 or CW8 options limited to 25°C, 120-277V only.

 4. Requires the use of a step down transformer. Not evailable in combination with sensor options at 1200mA.

 5. Only for use with 480V Wye systems Per NEC, not for use with ungrounded systems, impedance grounded systems or corner grounded systems (commonly known as Three Phase Three Wire Delta. Three Phase High Leg Delta and Three Phase Corner Grounded Delta systems).

 6. Custom Colors are available. Salue charges sould be sentled to explore the phase sould be supported by the phase three Phase Corner Grounded Delta systems).
- 6. Custom colors are available. Setup charges apply. Paint chip samples required. Extended Lead times apply.
 7. Extended lead times apply. Use dedicated IES files when performing layouts.
 8. Not available with HA option.
 9. Cannot be used with other control options.

- 10. Low voltage control lead drought out 18" outside fixture.

 11. Only available with 8B8 or CW8 in single light square. HA option available for single light square only. Limited to 1A and below.

 12. Not available with 1200, UPL, BB8 and CW8 options. Available for single light square only.

- 13. Not available with 12-0, 01-2, aba ain of variable to a single right square only.

 13. Not available with SL2, SL3, SL4, HA, 8BB, CWB, R, or PER7 options.

 14. Operates a single light square only. Cold weather option operates 20°C to +40°C, standard 0°C to +40°C. Backbox is non-IP rated.

 15. Compatible with standard 3-PIN photocontrols, 5-PIN or 7-PIN AMSI controls.

 16. Requires the use of P photocontrol or the PER7 or R photocontrol receptable with photocontrol accessory. See After Hours Dim supplemental guide for additional information.
- 17. The FSIR-100 configuration tool is required to adjust parameters including high and low modes, sensitivity, time delay, cutoff and more. Consult your lighting representative at Eaton for more information.

 18. Replace LXX with mounting height in feet for proper lens selection le.g., L8=8' mounting height). L8, L20, L40, and L40W are available options.

- 19. Includes integral photosensor.

 20. LumaWatt wireless sensors are factory installed requiring network components in appropriate quantities. See www.eaton.com/lighting for LumaWatt application information 21. Bronze sensor is shipped with Bronze fixtures. White sensor shipped on all other housing color options.

 22. Not available with HSS option.

 23. Only for use with \$L2, \$L3 and \$L4 distributions. The light square trim plate is painted black when the HSS option is selected.

 24. CE is not available with the 1200, DAU, LWR, MS, MS/DIM, P, R or PER7 options. Available in 120-277V only.
- 25. One required for each light square.
