# Architectural Review Board Staff Report

Project type:Site Development PlanMeeting Date:May 12, 2022From:Shilpi Bharti, PlannerLocation:15310 Conway RoadDescription:Chabad at Chesterfield (SDP): Site Development Plan, Landscape Plan, Lighting Plan, and<br/>Architectural Elevations for Chabad at Chesterfield on a 1.49-acre tract of land, zoned<br/>"PC" Planned Commercial District.

# **PROPOSAL SUMMARY**

Chabad at Chesterfield has submitted a Site Development Plan, Landscape Plan, Lighting Plan, and Architectural Elevations for a proposed Jewish facility at 15310 Conway Road. The project was presented in front of the Architectural Review Board on April 14. There were several comments related to building scale, and landscaping. The applicant requested to hold and the board approved the request by a vote of 4-0. Since then, the applicant has revised their submittal.

Proposed development includes:

- 15,000 square feet of single-story building
- 58 Parking spaces
- Landscaping
- Screen wall
- Lighting Plan

Figure 1: Site Plan

# **CHANGES SINCE APRIL ARB:**

The applicant has updated the Landscape Plan, Elevations and Lighting Plan. The Landscape Plan is updated to provide three different types of shrubs (marked with red circle in the Landscape Plan) along I-64 corridor.

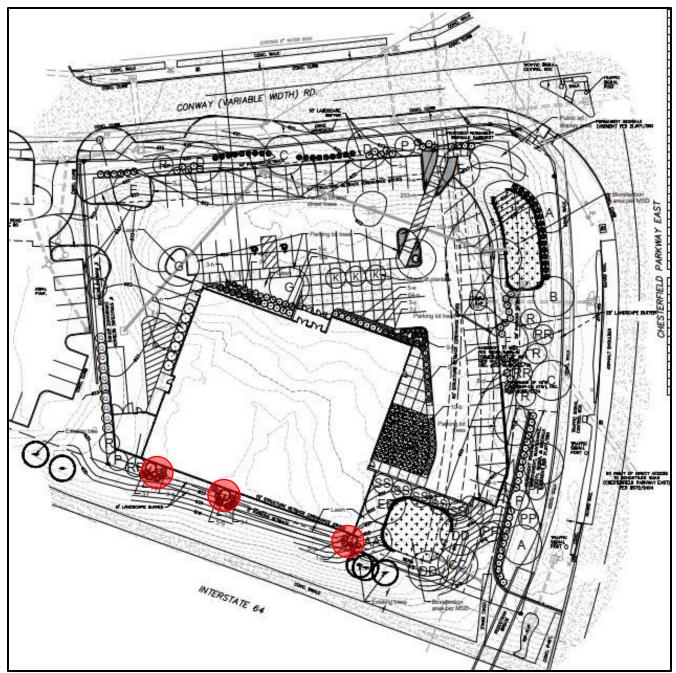

Figure2: Landscape Plan Updated

Updated elevations include 1" deep revels and, white and gray patterns on north, east and south. Additionally, there is concrete form liner on north and west side elevations. Site Plan, access and circulation remains the same, which the previous ARB report (attached) highlights the plan in detail. Applicant has also revised the flood light cut sheet to show the zero light level casting on the parapet of the building.

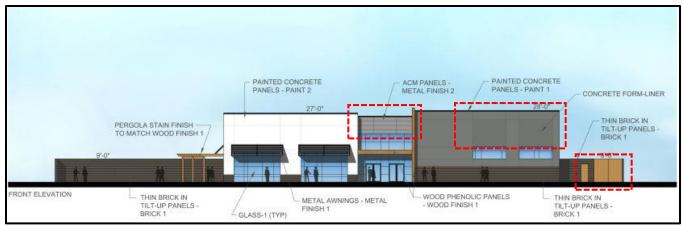

Figure 3: North Side Elevation

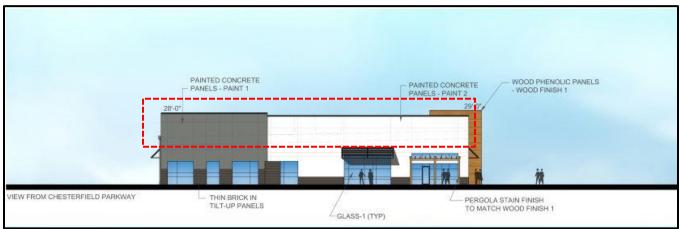

Figure 4: East Side Elevation

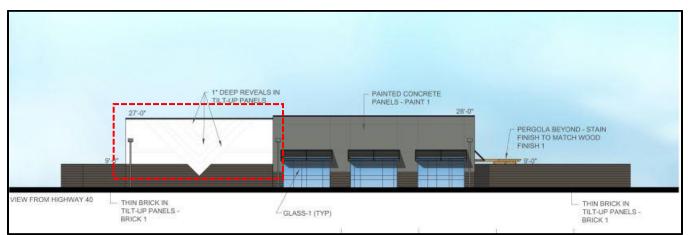

Figure 5: South Side Elevation

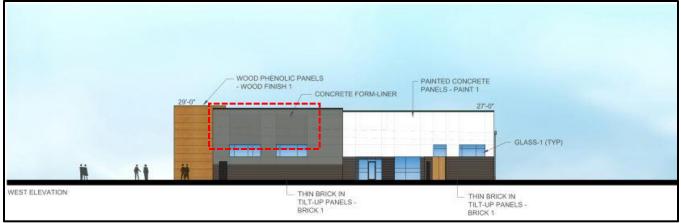

Figure 6: West Side Elevation

# Rendering

Figure 7: Rendering

# **DEPARTMENTAL INPUT**

Be advised, this project is still going through development review by City Staff and will not proceed to the Planning Commission until all outstanding items have been addressed. All recommendations made by the ARB will be included in Staff's report to the Planning Commission.

# MOTION

The following options are provided to the Architectural Review Board for consideration relative to this application:

- 1) "I move to forward the Site Development Plan, Landscape Plan, Lighting Plan, and Architectural Elevations for 15310 Conway Road (Chabad at Chesterfield), as presented, with a recommendation for approval (or denial)."
- 2) "I move to forward the Site Development Plan, Landscape Plan, Lighting Plan, and Architectural Elevations for 15310 Conway Road (Chabad at Chesterfield) with a recommendation for approval with the following conditions..."

# Architectural Review Board Staff Report

Project type:	Site Development Plan
Meeting Date:	April 14, 2022
From:	Shilpi Bharti, Planner 🛛 🖇
Location:	15310 Conway Road
Description:	<b>Chabad at Chesterfield (SDP)</b> : Site Development Plan, Landscape Plan, Lighting Plan, and Architectural Elevations for Chabad at Chesterfield on a 1.49-acre tract of land, zoned "PC" Planned Commercial District.

# **PROPOSAL SUMMARY**

Chabad at Chesterfield has submitted a Site Development Plan, Landscape Plan, Lighting Plan, and Architectural Elevations for a proposed Jewish facility at 15310 Conway Road.

Proposed development includes:

- 15,000 square feet of single-story building
- 58 Parking spaces
- Landscaping
- Screen wall
- Lighting Plan

# **HISTORY OF SUBJECT SITE**

Prior to the incorporation of the City of Chesterfield, this site was zoned "R3"—Residence

Figure 1: Subject Site

District by St. Louis County. In 2007, the City rezoned the property to "PC" Planned Commercial District via Ordinance Number 2361. This ordinance was later repealed in 2008 to accommodate a Site Development Plan application that was filed simultaneously for a 27,000 square-foot, three (3) story bank building, but was put on hold indefinitely. In January of 2021, the governing ordinance was amended to modify development criteria for the subject site, including permitted uses, setbacks and density requirements. The site is governed under the provisions of Ordinance 3150.

# **STAFF ANALYSIS**

# Site Relationships

The proposed building is 15,000 square feet on 1.49 acres of land. There are 58 parking spaces provided in the proposed development that complies with the Unified Development Code minimum parking requirement. The building design is of a similar height to the adjacent building across and along Conway Road.

# **Circulation System and Access**

The site is accessed through a shared driveway of 15320 Conway Road (property west of the subject site). Internal driveways are 22' wide with two-way access. Direct connection of the internal sidewalk system is provided on the northeast corner of the site.

Figure 2: Site Plan

# Scale, Topography and Retaining Wall

The site is sloped towards the south having higher elevations on the north. The proposed development is planning to level the site to match the finished floor with Conway Road. The height of the proposed building is 29'. Chesterfield Parkway East is 8' higher than the site ground level, thus the height of the building from Chesterfield Airport Road will be 20'. The site is proposing minor retaining walls on the east side of the property near the existing walls by the Chesterfield Parkway overpass. The retaining walls will be screened with landscaping.

# **Materials and Color**

Building materials include brick, painted concrete panels, dark grey phenolic panels and wood phenolic panels. The entrance is recessed with lots of glass and a wood accent wall. The north and northeast elevations have large windows, and concrete mass walls. The rooftop mechanical units will be screened by the building parapets. A trash enclosure is provided on the southwest of the site. Elevations of all sides of the building can be found in the attached ARB packet.

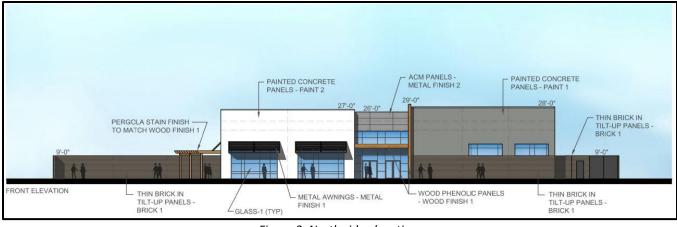

Figure 3: North side elevation

# Lighting

There are four types of light fixtures proposed for the entire development. There are six (6) parking lights, one (1) wall pack, eighteen (18) flood lights, and two (2) LED wall cylinders.

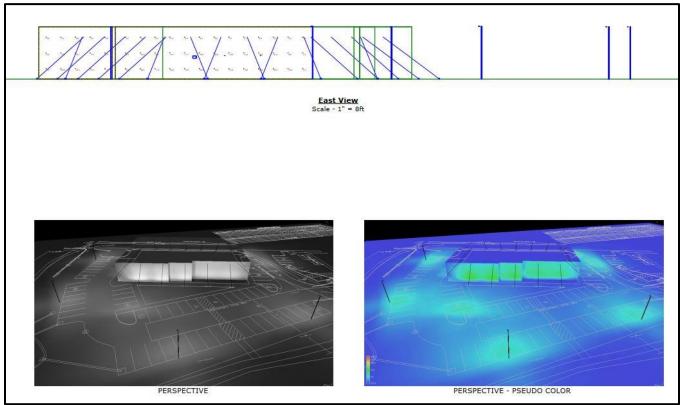

Figure 4: Up light projection

# Landscaping

As per the site specific ordinance, landscape is required. A five (5) foot buffer is required from the southern boundary, ten (10) feet from the right-of-way of Conway Road on the northern boundary, and twenty-five (25) feet from the right-of-way of Chesterfield Parkway East on the eastern boundary. Applicant has depicted all the required landscape buffers. Figure 2 shows the landscape plan of the site, which consists of one bio-retention basin, twelve (12) different varieties of trees, and twelve (12) different varieties of shrubs and grass.

# Rendering

Figure 5. Rendering 1

Figure 6: Rendering 2

# **DEPARTMENTAL INPUT**

Be advised, this project is still going through development review by City Staff and will not proceed to the Planning Commission until all outstanding items have been addressed. All recommendations made by the ARB will be included in Staff's report to the Planning Commission.

# MOTION

The following options are provided to the Architectural Review Board for consideration relative to this application:

- 1) "I move to forward the Site Development Plan, Landscape Plan, Lighting Plan, and Architectural Elevations for 15310 Conway Road (Chabad at Chesterfield), as presented, with a recommendation for approval (or denial)."
- 2) "I move to forward the Site Development Plan, Landscape Plan, Lighting Plan, and Architectural Elevations for 15310 Conway Road (Chabad at Chesterfield) with a recommendation for approval with the following conditions..."

# CHABAD OF CHESTERFIELD 03.22.2022

# Architect's Statement of Design

Chabad of Chesterfield will be a new one story building and will serve as a place to gather and gain knowledge of the Jewish faith. It will include a shul, an area to lounge and teach cooking classes, some learning spaces, and an area of future expansion that may be leased as professional space. The total area of the building will not exceed 15,000 GSF. Outside are areas associated with parking, a small patio with covered pergola, and an area for playground equipment.

# **General Requirements for Site Design**

# Site Relationships:

The site layout places the building in the center of the site, with parking that wraps conveniently on 3 sides. There is a generous plaza space between the main entry doors and the parking lot in front for safe access during peak times. A side entrance is also available to the east to provide direct access to the learning spaces. Parking on the east side of the building is single loaded and faced away from the fenced play area. An outdoor seating area is also located on this side of the building with an overhead pergola to help define the space. Due to the proximity of the Interstate highway, 9' brick clad screen walls provide a buffer to both glare and noise that will be present from vehicles at high speed. Views are focused primarily to the north and east. The building walls and screen walls will provide shade from afternoon sun and help to keep these outdoor areas cool in the summer. The trash enclosure design is intended to be very discrete by using the same 9' brick walls and wainscot on the building to wrap the trash area and appear to be part of the building architecture.

# **Circulation System and Access:**

Bicycles are encouraged as a means for arriving at the building. Racks are conveniently located adjacent to the entry plaza in front of the building. Sidewalks are located along Chesterfield Parkway East and Conway Road. We will provide a direct connection of the internal sidewalk system to the NE corner of the site. A change in paving material will occur where the sidewalk crosses the parking area to encourage vehicles to watch for pedestrians. Parking is located on the front and each side of the building. There is a generous landscape buffer in the front of the building between parking and building and between parking and the street.

# Topography:

The area for the building pad on this site sits very low so we intend to bring the finished floor up somewhat to better address Conway Road and provide a more gradual sloped connection into the site. Our grading plan proposes round cut and fill slopes, both horizontally and vertically, and results in a very natural appearance to the overall site.

# **Retaining Walls:**

Some minor retaining walls are required to transition near the existing walls by the Chesterfield Parkway overpass and to improve volume to our stormwater system. Both walls are on the east side of our site and will be screened with landscaping.

# **General Requirements for Building Design**

# Scale:

Chabad of Chesterfield is a one story building compatible in size, proportion, design and orientation to the new building recently constructed to the west, as well as the one story building across Conway Road. Awnings, Pergola, Canopies and wall insets are used to achieve a sense of human scale. While the nearest building to the west is over 100' away, similar fenestration can be found on both buildings.

# Design:

All facades are coordinated in color, material types, architectural form and detailing. The building is broken down into groups of neutral painted colors and earth-tone materials. The main active corner is a light color, the entrance is recessed with lots of glass and a wood accent wall. The other less active sides transition into more grey brick and mid-tone painted concrete walls. We have located the majority of the largest windows for the project faced north and north east and used concrete mass walls to store and release heat slowly particularly on areas facing southwest. We are providing skylights in key areas to reduce the need for artificial electric light at times during the day. Concrete site cast wall panels benefit from much reduced transportation and fuel costs that are associated with the alternative pre-cast wall panels that are shipped from a long distance away. Many other materials used inside and out will benefit from low VOC content and high quantities of recycled materials. Our rooftop mechanical units will be screened by the building parapets.

# Materials and Colors:

Colors, materials and detailing will be compatible with adjacent buildings and properties. Brick and concrete are highly durable materials. Phenolic panels used to create the wood accent wall near the main entrance are virtually graffiti proof. All materials on this project are neutral in color, warm, and not highly reflective.

# Landscape Design and Screening:

This property is surrounded by roadways on three of four sides, with the prominence of the corner location at Conway and Chesterfield Parkway East.

We have provided street tree plantings along both Conway and Chesterfield Parkway, but have limited plantings at the intersection to allow clear views into the property. Since Conway provides the only route to the property via the shared driveway on the adjoining property, we have developed plantings that allow clear views to the facilities main entrance under canopy trees but over clusters of shrubs and grasses.

On the property's common border with the adjoining office building, we have utilized small columnar evergreen trees (Keterleeri Junipers) to screen our loading facilities from the neighboring views.

Along Interstate 64 we are will be planting evergreen trees at the southwestern corner of the building to screen the service area in conjunction with the architectural treatment of this enclosure. These evergreens will help frame views of the building along with the two preserved existing trees on the right of way.

The playground is programmed for the west side of the building along Chesterfield Parkway. As the roadway is elevated above the building and playground, we have provided a significant buffering along this portion of the site. In this area we have specified Canopy Trees and Evergreen Trees as well as significant shrub groupings for color, texture and screening.

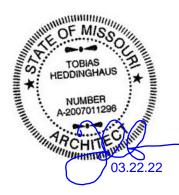

As state earlier, the trash enclosure design is intended to be very discrete by using the same 9' brick walls and wainscot on the building to wrap the trash area and appear to be part of the building architecture.

# Signage:

A Signage Package will be submitted at a later date.

# Lighting:

Site Lighting and Building Accent Lighting will be provided and consistent with adjacent properties. No on-site illumination source shall be situated so that light is cast directly on adjoining properties or Public Roadways. All lighting will adhere to footcandle levels as outlined by the City of Chesterfield. The enclosed Photometric Drawing/ Cut Sheets identify fixture style, location, and characteristics.

# **DESIGNER'S NOTE:**

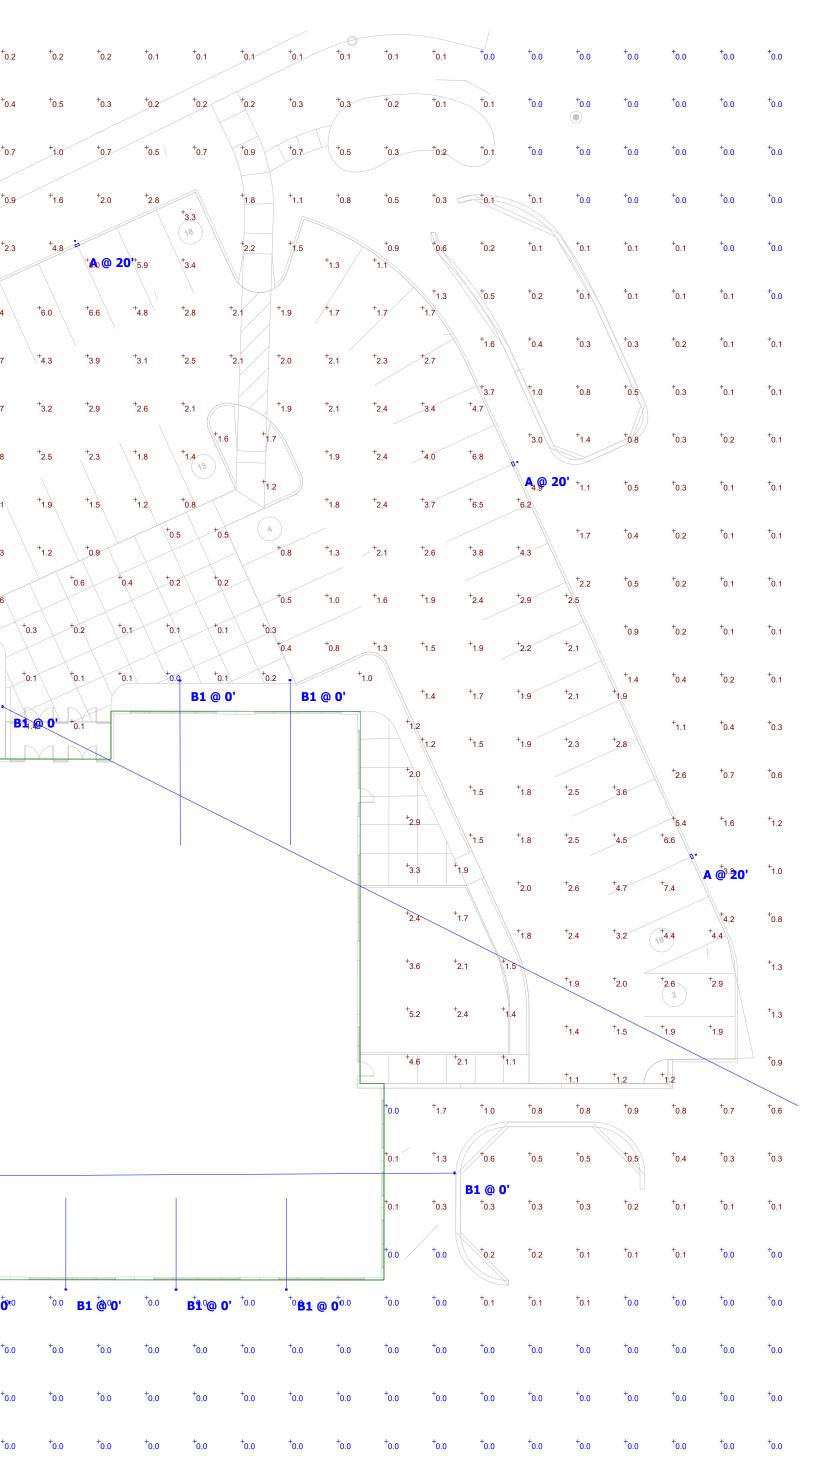

THE ENGINEER AND/OR ARCHITECT MUST DETERMINE APPLICABILITY OF THE LAYOUT TO EXISTING / FUTURE FIELD CONDITIONS. THIS LIGHTING LAYOUT REPRESENTS ILLUMINATION LEVELS CALCULATED FROM LABORATORY DATA TAKEN UNDER CONTROLLED CONDITIONS IN ACCORDANCE WITH ILLUMINATING ENGINEERING SOCIETY (IESNA) APPROVED METHODS. ADDITIONALLY, THE PREPARER USED INFORMATION PROVIDED BY THE CUSTOMER. IF/WHEN SUFFICIENT INFORMATION WAS NOT PROVIDED, PREPARER USED EDUCATED ASSUMPTIONS. ACTUAL PERFORMANCE OF ANY MANUFACTURER'S LUMINAIRE(S) MAY VARY DUE TO VARIATION IN ELECTRICAL VOLTAGE, TOLERANCE IN LAMPS, AND OTHER FIELD CONDITIONS NOT ACCOUNTED FOR IN THIS PHOTOMETRIC ANALYSIS.

THESE LIGHTING CALCULATIONS ARE NOT A SUBSTITUTE FOR INDEPENDENT ENGINEERING ANALYSIS OF LIGHTING SYSTEM SUITABILITY AND SAFETY. THE ENGINEER AND/OR ARCHITECT IS RESPONSIBLE TO REVIEW FOR ENERGY CODE AND RELEVANT LIGHTING QUALITY COMPLIANCE.

# **DESIGNER'S NOTE:**

THE ENGINEER AND/OR ARCHITECT MUST DETERMINE APPLICABILITY OF THE LAYOUT TO EXISTING / FUTURE FIELD CONDITIONS. THIS LIGHTING LAYOUT REPRESENTS ILLUMINATION LEVELS CALCULATED FROM LABORATORY DATA TAKEN UNDER CONTROLLED CONDITIONS IN ACCORDANCE WITH ILLUMINATING ENGINEERING SOCIETY (IESNA) APPROVED METHODS. ADDITIONALLY, THE PREPARER USED INFORMATION PROVIDED BY THE CUSTOMER. IF/WHEN SUFFICIENT INFORMATION WAS NOT PROVIDED, PREPARER USED EDUCATED ASSUMPTIONS. ACTUAL PERFORMANCE OF ANY MANUFACTURER'S LUMINAIRE(S) MAY VARY DUE TO VARIATION IN ELECTRICAL VOLTAGE, TOLERANCE IN LAMPS, AND OTHER FIELD CONDITIONS NOT ACCOUNTED FOR IN THIS PHOTOMETRIC ANALYSIS.

THESE LIGHTING CALCULATIONS ARE NOT A SUBSTITUTE FOR INDEPENDENT ENGINEERING ANALYSIS OF LIGHTING SYSTEM SUITABILITY AND SAFETY. THE ENGINEER AND/OR ARCHITECT IS RESPONSIBLE TO REVIEW FOR ENERGY CODE AND RELEVANT LIGHTING QUALITY COMPLIANCE.

Notes

Туре

The new RSX LED Area family delivers maximum value by providing significant energy savings, long life and outstanding photometric performance at an affordable price. The RSX1 delivers 7,000 to 17,000 lumens allowing it to replace 70W to 400W HID luminaires.

The RSX features an integral universal mounting mechanism that allows the luminaire to be mounted on most existing drill hole patterns. This "no-drill" solution provides significant labor savings. An easy-access door on the bottom of mounting arm allows for wiring without opening the electrical compartment. A mast arm adaptor, adjustable integral slipfitter and other mounting configurations are available.

# **External Shields**

- 2
- VTES Any Type 5 distribution, is not available with WBA. MVOLT driver operates on any line voltage from 120-277V (50/60 Hz). HVOLT driver operates on any line voltage from 347-480V (50/60 Hz). XVOLT driver operates on any line voltage from 377-480V (50/60 Hz). XVOLT driver operates on any line voltage from 277V-480V (50/60 Hz). XVOLT not available with fusing (5F or DF) and not available with PE or PEX. Single fuse (5F) requires 120V, 277V or 347V. Double fuse (DF) requires 208V, 240V or 480V. Maximum tilt is 90° above horizontal. It may be ordered as an accessory. 3 4
- 5
- 67
- IL may be ordered as an accessory. Requires MVOLT or 347V. Not available in combination with other light sensing control options (following options cannot be combined: PE, PEX, PER7, FAO, DMG, PIRHN).
- Requires 120V, 208V, 240V or 277V. 10

- Twistlock photocell ordered and shipped as a separate line item from Acuity Brands Controls. See accessories. Shorting Cap included. Dimming leads capped for future use. 11
- 12
- For units with option PERY, the mounting must be restricted to +/-45° from horizontal aim per ANSI C136.10-2010. Two or more of the following options cannot be combined including DMG, PER7, FAQ and PIRHN. 13
- 14 Must be ordered with PIRHN.
- 15 16
- Requires MVOLT or HVOLT. Must be ordered with NLTAIR2. For additional information on PIRHN
- visit |
- Must be ordered with fixture for factory pre-drilling. Requires luminaire to be specified with PER7 option. Ordered and shipped as a separate line item from Acuity Brands Controls. 17 18

# **Performance Data**

## Lumen Ambient Temperature (LAT) Multipliers

Use these factors to determine relative lumen output for average ambient temperatures from 0-50°C (32-122°F).

Ambient	Ambient	Lumen Multiplier
0°C	32°F	1.05
5℃	41°F	1.04
10°C	50°F	1.03
15℃	59°F	1.02
20°C	68°F	1.01
25℃	77°F	1.00
30°C	86°F	0.99
35℃	95°F	0.98
40°C	104°F	0.97
45℃	113°F	0.96
50°C	122°F	0.95

# **Electrical Load**

		Current (A)								
Performance Package	System Watts (W)	120V	208V	240V	277V	347V	480V			
P1	51W	0.42	0.25	0.21	0.19	0.14	0.11			
P2	72W	0.60	0.35	0.30	0.26	0.21	0.15			
P3	109W	0.91	0.52	0.45	0.39	0.31	0.23

#### Automotive Front Row - Rotated Optics (AFRL90/R90)

(Example: 2@180 - arrows indicate direction of light exiting the luminaire)

	Motion Sensor Default Settings - Option PIRHN					
Option	Dimmed State (unoccupied)	High Level (when occupied)	Photocell Operation	Dwell Time (occupancy time delay)	Ramp-up Time (from unoccupied to occupied)	Ramp-down Time (from occupied to unoccupied)
NLTAIR2 PIRHN	Approx. 30% Output	100% Output	Enabled @ 1.5FC	7.5 minutes	3 seconds	5 minutes

\*Note: NLTAIR2 PIRHN default settings including photocell set-point, high/low dim rates, and occupancy sensor time delay are all configurable using the Clairity Pro App. Sensor coverage pattern shown with luminaire at 0°. Sensor coverage pattern is affected when luminaire is titled.

#### **FEATURES & SPECIFICATIONS**

#### INTENDED USE

The RSX LED area family is designed to provide a long-lasting, energy-efficient solution for the onefor-one replacement of existing metal halide or high pressure sodium lighting. The RSX1 delivers 7,000 to 17,000 lumens and is ideal for replacing 70W to 400W HID pole-mounted luminaires in parking lots and other area lighting applications.

#### CONSTRUCTION

The RSX LED area luminaire features a rugged die-cast aluminum main body that uses heatdissipating fins and flow-through venting to provide optimal thermal management that both enhances LED performance and extends component life. Integral "no drill" mounting arm allows the luminaire to be mounted on existing pole drillings, greatly reducing installation labor. The light engines and housing are sealed against moisture and environmental contaminants to IP66. The low-profile design results in a low EPA, allowing pole optimization. All mountings are rated for minimum 1.5 G vibration load per ANSI C136.31. 3G Mountings: Include SPA, RPA, MA, IS, AASP, and AARP rated for 3G vibration. 1.5G Mountings: Include WBA, WBASC, AAWB and AAWSC rated for 1.5G vibration.

#### FINISH

Exterior parts are protected by a zinc-infused Super Durable TGIC thermoset powder coat finish that provides superior resistance to corrosion and weathering. A tightly controlled multi-stage process ensures superior adhesion as well as a minimum finish thickness of 3 mils. The result is a high-quality finish that is warrantied not to crack or peel.

#### OPTICS

Precision acrylic refractive lenses are engineered for superior application efficiency, distributing the light to where it is needed most. Available in short and wide pattern distributions including Type 2, Type 3, Type 35, Type 4, Type 4S, Type 5, Type 5S, AFR (Automotive Front Row), and AFR rotated AFRR90 and ARFL90.

#### ELECTRICAL

Light engine(s) configurations consist of high-efficacy LEDs mounted on metal-core circuit boards and aluminum heat sinks to maximize heat dissipation. Light engines are IP66 rated. LED lumen maintenance is >L92/100,000 hours. CCT's of 3000K, 4000K and 5000K (minimum 70 CRI) are available. Class 1 electronic drivers ensure system power factor >90% and THD <20%. Easily serviceable 10kV surge protection device meets a minimum Category C Low operation (per ANSI/ IEEE C62.41.2).

#### STANDARD CONTROLS

The RSX LED area luminaire has a wide assortment of control options. Dusk to dawn controls include MVOLT and 347V button-type photocells and NEMA twist-lock photocell receptacles.

#### nLIGHT AIR CONTROLS

The RSX LED area luminaire is also available with nLight® AIR for the ultimate in wireless control. This powerful controls platform provides out-of-the-box basic motion sensing with photocontrol functionality and is suitable for mounting heights up to 40 feet. No commissioning is required when using factory default settings that provide basic stand-alone motion occupancy dimming that is switched on and off with a built-in photocell. See chart above for motion sensor default out-of-box settings. For more advanced wireless functionality, such as group dimming, nLight AIR can be commissioned using a smartphone and the easy-touse CLAIRITY app. nLight AIR equipped luminaries can be grouped, resulting in motion sensor and photocell group response without the need for additional equipment. Scheduled dimming with motion sensor over-ride can be achieved when used with the nLight Eclypse. Additional information about nLight Air can be found here.

#### INSTALLATION

Integral "no-drill" mounting arm allows for fast, easy mounting using existing pole drillings. Select the "SPA" option for square poles and the "RPA" option to mount to round poles. Note, the RPA mount can also be used for mounting to square poles by omitting the RPA adapter plate. Select the "MA" option to attach the luminaire to a 2.3/8" horizontal mast arm or the "IS" option for an adjustable slipfitter that mounts on a 2.3/8" OD tenon. The adjustable slipfitter has an integral junction box and offers easy installation. Can be tilted up to 90° above horizontal. Additional mountings are available including a wall bracket, adjustable til arm for direct-to-pole and wall and a surface conduit box for wall mount applications.

#### LISTINGS

CSA Certified to meet U.S. and Canadian standards. Suitable for wet locations. Rated for -40°C minimum ambient. DesignLights Consortium® (DLC) Premium qualified product and DLC qualified product. Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at <u>www.designlights.org/QPL</u> to confirm which versions are qualified.

International Dark-Sky Association (IDA) Fixture Seal of Approval (FSA) is available for all products on this page utilizing 3000K color temperature only. U.S. Patent No. D882, 146S

#### **BUY AMERICAN**

Product with the BAA option is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT. Please refer to www.acuitybrands.com/buy-american for additional information.

#### WARRANTY

5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at:

#### www.acuitybrands.com/support/warranty/ternis-and-conditions

**Note:** Actual performance may differ as a result of end-user environment and application. All values are design or typical values, measured under laboratory conditions at 25 °C. Specifications subject to change without notice.

# **FEATURES & SPECIFICATIONS**

**INTENDED USE** — **These specifications are for USA standards only.** Square Straight Steel is a general purpose light pole for up to 39-foot mounting heights. This pole provides a robust yet cost effective option for mounting area lights and floodlights.

#### CONSTRUCTION -

Pole Shaft: The pole shaft is of uniform dimension and wall thickness and is made of a weldable-grade, hot-rolled, commercial-quality steel tubing with a minimum yield of 55 KSI (11-gauge, .1196"), or 50 KSI (7-gauge, .1793"). Shaft is one-piece with a full-length longitudinal high-frequency electric resistance weld. Uniformly square in crosssection with flat sides, small corner radii and excellent torsional qualities. Available shaft widths are 4", 5" and 6".

Pole Top: Options include tenon top, drilled for side mount fixture, tenon with drilling (includes extra handhole) and open top. Side drilled and open top poles include a removable top cap.

**Handhole:** A reinforced handhole with grounding provision is provided at 18" from the base on side A. Positioning the handhole lower may not be possible and requires engineering review; consult Tech Support-Outdoor for further information. Every handhole includes a cover and cover attachment hardware. The handhole has a nominal dimension of 2.5" x 5".

Base Cover: A durable ABS plastic two-piece full base cover, finished to match the pole, is provided with each pole assembly. Additional base cover options are available upon request.

**Anchor Base/Bolts:** Anchor base is fabricated from steel that meets ASTM A36 standards and can be altered to match existing foundations; consult factory for modifications. Anchor bolts are manufactured to ASTM F1554 Standards grade 55, (55 KSI minimum yield strength and tensile strength of 75-95 KSI). Top threaded portion (nominal 12") is hot-dipped galvanized per ASTM A-153.

HARDWARE — All structural fasteners are high-strength galvanized carbon steel. All non-structural fasteners are galvanized or zinc-plated carbon steel or stainless steel.

**FINISH** — Extra durable painted finish is coated with TGIC (Triglycidyl Isocyanurate) Polyester powder that meets 5A and 5B classifications of ASTM D3359. Powder-coat finishes include Dark Bronze, White, Black, and Natural Aluminum colors. Architectural Colors and Special Finishes are available by quote and include, but are not limited to Paint over Hot-dipped Galvanized, RAL Colors, Custom Colors and Extended Warranty Finishes.

**BUY AMERICAN** — Product with the BAA option is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT. Please refer to <u>www.acuitybrands.com/buy-american</u> for additional information.

**INSTALLATION** — **Do not** erect poles without having fixtures installed. Factory-supplied templates must be used when setting anchor bolts. Lithonia Lighting will not accept claim for incorrect anchorage placement due to failure to use Lithonia Lighting factory templates. If poles are stored outside, all protective wrapping must be removed immediately upon delivery to prevent finish damage. Lithonia Lighting is not responsible for the foundation design.

**WARRANTY** — 1-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: <u>www.acuitybrands.com/support/warranty/terms-and-conditions</u>

**NOTE**: Actual performance may differ as a result of end-user environment and application. Specifications subject to change without notice.

#### NOTES:

- 1. Handhole covers (HHC), full base covers (FBC) and top caps (TC) shipped separately. No need to call out in nomenclature. For additional parts please order as replacements.
- 2. Wall thickness will be signified with a "C" (11 Gauge) or a "G" (7-Gauge) in nomenclature. "C" 0.1196" | "G" 0.1793".
- 3. PT open top poles include top cap. When ordering tenon mounting and drill mounting for the same pole, follow this example: DM28/T20. The combination includes a required extra handhole.
- 4. Refer to the fixture spec sheet for the correct drilling template pattern and orientation compatibility.
- 5. Insert "1" or "2" to designate fixture size; e.g. DM19AST2.
- On 4" and 5" poles, VD cannot be installed if provisions (EHH, FDL, NPL, CPL) are located higher than 2/3 of the pole's total height.

Example: Pole height is 25ft, A provision cannot be placed above 16ft.

7. Specify location and orientation when ordering option.

For "x": Specify the height above the base of pole in feet or feet and inches; separate feet and inches with a "-".

- Example: 5ft = 5 and 20ft 3in = 20-3
- For "y": Specify orientation from handhole (A,B,C,D) Refer to the Handhole Orientation diagram below. Example: 1/2" coupling at 5'8", orientation C = CPL12/5-8C
- Horizontal arm is 18" x 2-3/8" 0.D. tenon standard, with radius curve providing 12" rise and 2-3/8" 0.D. If ordering two horizontal arm at the same height, specify with HAxyy. Example: HA20BD.
- 9. FDL does not come with GFCI outlet or handhole cover. These must be supplied by contractor or electrician.
- 10. Combination of tenon-top and drill mount includes extra handhole. EHH includes cover.
- 11. Provides enhanced corrosion resistance.
- 12. Use when mill certifications are required.
- 13. Finish must be specified. Additional colors available; see Architectural Colors brochure linked here (Form No. 794.3).

#### Accessories: Order as separate catalog number.

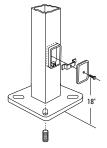

- PL DT20 Plugs for ESX drillings
- PL DT8 Plugs for DMxxAS drillings

#### **IMPORTANT INSTALLATION NOTES:**

- **Do not** erect poles without having fixtures installed.
- Factory-supplied templates must be used when setting anchor bolts. Lithonia Lighting will not accept claim for incorrect anchorage placement due to failure to use Lithonia Lighting factory templates.
- If poles are stored outside, all protective wrapping must be removed immediately upon delivery to prevent finish damage.
- Lithonia Lighting is not responsible for the foundation design.
- Bolt circles have +/- 1/2" tolerance.

CAUTION: These specifications are intended for general purposes only. Lithonia Lighting reserves the right to change material or design, without prior notice, in a continuing effort to upgrade its products.

#### FEATURES & SPECIFICATIONS

#### INTENDED USE

The WPX LED wall packs are designed to provide a cost-effective, energy-efficient solution for the one-for-one replacement of existing HID wall packs. The WPX1, WPX2 and WPX3 are ideal for replacing up to 150W, 250W, and 400W HID luminaires respectively. WPX luminaires deliver a uniform, wide distribution. WPX is rated for -40°C to 40°C.

#### CONSTRUCTION

WPX feature a die-cast aluminum main body with optimal thermal management that both enhances LED efficacy and extends component life. The luminaires are IP66 rated, and sealed against moisture or environmental contaminants.

#### ELECTRICAL

Light engine(s) configurations consist of high-efficacy LEDs and LED lumen maintenance of L90/100,000 hours. Color temperature (CCT) options of 3000K, 4000K and 5000K with minimum CRI of 70. Electronic drivers ensure system power factor >90% and THD <20%. All luminaires have 6kV surge protection (Note: WPX1 LED P1 package comes with a standard surge protection rating of 2.5kV. It can be ordered with an optional 6kV surge protection). All photocell (PE) operate on MVOLT (120V - 277V) input.

Note: The standard WPX LED wall pack luminaires come with field-adjustable drive current feature. This feature allows tuning the output current of the LED drivers to adjust the lumen output (to dim the luminaire).

### NOTES

 All WPX wall packs come with 6kV surge protection standard, except WPX1 LED P1 package which comes with 2.5kV surge protection standard. Add SPD6KV option to get WPX1 LED P1 with 6kV surge protection. Sample nomendature: WPX1 LED P1 40K MVOLT SPD6KV DDBXD

- 2. Battery pack options only available on WPX1 and WPX2.
- Battery pack options not available with 347V and PE options.

#### INSTALLATION

WPX can be mounted directly over a standard electrical junction box. Three 1/2 inch conduit ports on three sides allow for surface conduit wiring. A port on the back surface allows poke-through conduit wiring on surfaces that don't have an electrical junction box. Wiring can be made in the integral wiring compartment in all cases. WPX is only recommended for installations with LEDs facing downwards.

#### LISTINGS

CSA Certified to meet U.S. and Canadian standards. Suitable for wet locations. IP66 Rated. DesignLights Consortium® (DLC) qualified product. Not all versions of this product may be DLC qualified. Please check the DLC Qualified Products List at <u>www.designlights.org/QPL</u> to confirm which versions are qualified. International Dark Sky Association (IDA) Fixture Seal of Approval (FSA) is available for all products on this page utilizing 3000K color temperature only.

#### WARRANTY

5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at:

www.acuityprands.com/CustomerKesources/Terms\_and\_conditions.aspx.

**Note:** Actual performance may differ as a result of end-user environment and application. All values are design or typical values, measured under laboratory conditions at 25°C. Specifications subject to change without notice.

# Introduction

The WPX LED wall packs are energy-efficient, costeffective, and aesthetically appealing solutions for both HID wall pack replacement and new construction opportunities. Available in three sizes, the WPX family delivers 1,550 to 9,200 lumens with a wide, uniform distribution.

The WPX full cut-off solutions fully cover the footprint of the HID glass wall packs that they replace, providing a neat installation and an upgraded appearance. Reliable IP66 construction and excellent LED lumen maintenance ensure a long service life. Photocell and emergency egress battery options make WPX ideal for every wall mounted lighting application.

# EXAMPLE: WPX2 LED 40K MVOLT DDBXD

# **Performance Data**

## **Electrical Load**

Luminaire	Input Power (W)	120V	208V	240V	277V	347V
WPX1 LED P1	11W	0.09	0.05	0.05	0.04	0.03
WPX1 LED P2	24W	0.20	0.12	0.10	0.09	0.07
WPX2	47W	0.39	0.23	0.20	0.17	0.14
WPX3	69W	0.58	0.33	0.29	0.25	0.20

### **Projected LED Lumen Maintenance**

Data references the extrapolated performance projections in a  $25^{\circ}$ C ambient, based on 6,000 hours of LED testing (tested per IESNA LM-80-08 and projected per IESNA TM-21-11).

To calculate LLF, use the lumen maintenance factor that corresponds to the desired number of operating hours below. For other lumen maintenance values, contact factory.

Operating Hours	50,000	75,000	100,000
Lumen Maintenance Factor	>0.94	>0.92	>0.90

#### HID Replacement Guide

**Photometric Diagrams** 

Luminaire	Equivalent HID Lamp	WPX Input Power
WPX1 LED P1	100W	11W
WPX1 LED P2	150W	24W
WPX2	250W	47W
WPX3	400W	69W

# Lumen Output

Luminaire	Color Temperature	Lumen Output
	3000K	1,537
WPX1 LED P1	4000K	1,568
	5000K	1,602
	3000K	2,748
WPX1 LED P2	4000K	2,912
	5000K	2,954
	3000K	5,719
WPX2	4000K	5,896
	5000K	6,201
	3000K	8,984
WPX3	4000K	9,269
	5000K	9,393

# Lumen Ambient Temperature (LAT) Multipliers

Use these factors to determine relative lumen output for average ambient temperatures from 0-50°C (32-122°F).

Ambient	Ambient	Lumen Multiplier
0°C	32°F	1.05
5°C	41°F	1.04
10°C	50°F	1.03
15°C	59°F	1.02
20°C	68°F	1.01
25°C	77°F	1.00
30°C	86°F	0.99
35°C	95°F	0.98
40°C	104°F	0.97

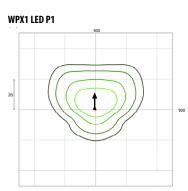

#### **Emergency Egress Battery Packs**

The emergency battery backup is integral to the luminaire — no external housing or back box is required. The emergency battery will power the luminaire for a minimum duration of 90 minutes and deliver minimum initial output of 550 lumens. Both battery pack options are CEC compliant.

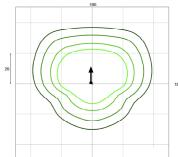

Battery Type	Minimum Temperature Rating	Power (Watts)	Controls Option	Ordering Example
Standard	0°C	4W	E4WH	WPX2 LED 40K MVOLT <b>E4WH</b> DDBXD
Cold Weather	-20°C	14W	E14WC	WPX2 LED 40K MVOLT <b>E14WC</b> DDBXD

# Introduction

TWX LED wall pack family, a ground-up design that has the low initial cost customers demand while providing superior performance and a traditional form. The TWX3 LED is energy efficient, saving up to 84% in energy costs when replacing a metal halide luminaire. Offering an expected service life of more than 20 years, the TWX3 LED eliminates frequent lamp and ballast replacements associated with traditional technologies.

The Adjustable Light Output (ALO) feature allows the contractor to set the light output during installation, to a level perfectly suited for the job site. The TWX3 LED ALO luminaires can replace anything from a 100W to 400W metal halide luminaire.

# **TWX LED Family Overview**

Luminaina	Voltore	Dhatasall	Lumens (4000K)				
Luminaire	Voltage	Photocell	P1	P2	P3	P4	
TWX1 LED	MVOLT (120-277V)	YES	1,600	2,950			
TWX2 LED	MVOLT (120-277V), 347V, 480V	YES	3,250	4,400	5,250	6,850	
TWX3 LED	MVOLT (120-277V), 347V	YES	8,800	10,650	12,900	13,850

# **FEATURES & SPECIFICATIONS**

#### INTENDED USE

The TWX3 LED is an energy-efficient, low maintenance LED wall pack for replacing up to a 400W MH fixture, providing the same footprint on the wall. TWX3 is ideal for higher mounting height applications such as industrial buildings, warehouses and schools.

#### CONSTRUCTION

Two-piece die-cast aluminum housing to optimize thermal management through conductive and convective cooling. The door is hinged on the side and can be removed for easy installation. The housing is completely sealed against moisture and environmental contaminants (IP65) and is suitable for the hose-down applications.

#### FINISH

Exterior painted parts are protected by a zinc-infused Super Durable TGIC thermoset powder coat finish that provides superior resistance to corrosion and weathering. A tightly controlled multi-stage process ensures a 3 mils thickness for a finish that can withstand extreme climate changes without cracking or peeling.

#### OPTICS

The advanced optical design uses both reflector and refractor technologies that work together to create superior illumination and further throw, getting the light where it is needed. The US-made borosilicate glass refractor is specifically designed to maximize light extraction and create a fully luminous luminaire for a better nighttime look.

#### ELECTRICAL

Light engine consists of high-efficacy LEDs mounted to housing to maximize heat dissipation and promote long-life (up to L81/100,000 hours at 25°C). The electronic driver has a power factor of >90%, THD <20%.

#### INSTALLATION

Designed for wall mounting above four feet from the ground. Housing is configured for mounting directly over a standard junction box (by others) or for surface wiring via any of three 1/2" threaded entry hubs.

#### LISTINGS

CSA certified to U.S. and Canadian standards. IP65 rated for outdoor applications. Rated

for -40°C minimum ambient. DesignLights Consortium® (DLC) qualified product. Not all versions of this product may be DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

#### WARRANTY

5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at:

Note: Actual performance may differ as a result of end-user environment and application. All values are design or typical values, measured under laboratory conditions at 25 °C. Specifications subject to change without notice.
